the critical information hidden therein that could avert a full blown accident or disaster She applies an innovative analytical technique multidimensional analysis of incident reports MAIR using Quantification Method III to validate the results and focus upon individual components identified within the causal chain of events that precede an accident She advocates wider acceptance and use of the Incident Report Analysing System ideally administered by a neutral and independent body to help prevent accidents not only in aviation but in relation to all complex systems such as nuclear power plants Serious Accidents and Human Factors offers aviation industry personnel as well as those involved more generally with safety risk assessment and accident prevention in other industries a comprehensive understanding of the accident causation chain events contributing to that chain and a method for identifying and eliminating causal factors in a pro active way Copublished with Professional Engineering Publishing For orders from Europe and the Middle East please contact Professional Engineering Publishing tel 44 1284 763 277 or fax 44 1284 704 006      **Operation of Aircraft** International Civil Aviation Organization.
