Global Climate Governance Beyond 2012 Architecture Agency And Adaptation:

Global Climate Governance Beyond 2012 Frank Biermann, Philipp Pattberg, Fariborz Zelli, 2010-02-18 An assessment of policy options for future global climate governance written by a team of leading experts from the European Union and developing countries Global climate governance is at a crossroads The 1997 Kyoto Protocol was merely a first step and its core commitments expire in 2012 This book addresses three questions which will be central to any new climate agreement What is the most effective overall legal and institutional architecture for successful and equitable climate politics What role should non state actors play including multinational corporations non governmental organizations public private partnerships and market mechanisms in general How can we deal with the growing challenge of adapting our existing institutions to a substantially warmer world This important resource offers policy practitioners in depth qualitative and quantitative assessments of the costs and benefits of various policy options and also offers academics from wide ranging disciplines insight into innovative interdisciplinary approaches towards international climate negotiations Climate Change and Global Policy Regimes Timothy Cadman, 2013-03-25 An analysis of the global climate talks and the key human systems threatened by increased greenhouse gas emissions including health refugee management energy production carbon markets and local government *Handbook on Climate Change and Human Security* Michael R Redclift, Marco Grasso, 2013-10-31 The Handbook is international in scope and provides an assessment that will be of value to academics students and policy professionals alike NGOs and policy institutes which need a grasp of the specificity and range of the issues and problems will all Climate Change Adaptation Strategies - An Upstream-downstream Perspective Nadine Salzmann, Christian Huggel, Samuel U. Nussbaumer, Gina Ziervogel, 2016-10-03 Climate change and the related adverse impacts are among the greatest challenges facing humankind during the coming decades Even with a significant reduction of anthropogenic greenhouse gas emissions it will be inevitable for societies to adapt to new climatic conditions and associated impacts and risks This book offers insights to first experiences of developing and implementing adaptation measures with a particular focus on mountain environments and the adjacent downstream areas It provides a comprehensive state of the art of climate change adaptation in these areas through the collection and evaluation of knowledge from several local and regional case studies and by offering new expertise and insights at the global level As such the book is an important source for scientists practitioners and decision makers alike who are working in the field of climate change adaptation and towards sustainable development in the sense of the Paris Agreement and the Agenda 2030 Climate Change and Migration Gregory White, 2011-10-12 Recently though another force has generated a new wave of refugees global warming **Governing Climate Change** Harriet Bulkeley, Peter Newell, 2023-05-05 This fully revised and expanded new edition provides a short and accessible introduction to how climate change is governed by an increasingly diverse range of actors from civil society and business actors to multilateral development banks donors and cities The issue of global climate change has risen to the top of

the international political agenda Despite ongoing contestation about the science informing policy the economic costs of action and the allocation of responsibility for addressing the issue within and between nations it is clear that climate change will continue to be one of the most pressing and challenging issues facing humanity for many years to come The book Evaluates the role of states and non state actors in governing climate change at multiple levels of political organization local national and global Provides a discussion of theoretical debates on climate change governance moving beyond analytical approaches focused solely on nation states and international negotiations Examines a range of key topical issues in the politics of climate change Includes multiple examples from both the north and the global south Providing an inter disciplinary perspective drawing on geography politics international relations and development studies this book is essential reading for all those concerned not only with the climate governance but with the future of the environment in general

Displacement, Development, and Climate Change Nina Hall, 2016-03-22 This book focuses on one critical challenge climate change Climate change is predicted to lead to an increased intensity and frequency of natural disasters An increase in extreme weather events global temperatures and higher sea levels may lead to displacement and migration and will affect many dimensions of the economy and society Although scholars are examining the complexity and fragmentation of the climate change regime they have not examined how our existing international development migration and humanitarian organizations are dealing with climate change Focusing on three institutions the United Nations High Commissioner for Refugees the International Organization for Migration and the United Nations Development Programme the book asks how have these inter governmental organizations responded to climate change And are they moving beyond their original mandates given none were established with a mandate for climate change It traces their responses to climate change in their rhetoric policy structure operations and overall mandate change Hall argues that international bureaucrats can play an important role in mandate expansion often deciding whether and how to expand into a new issue area and then lobbying states to endorse this expansion They make changes in rhetoric policy structure and operations on the ground and therefore forge frame and internalize new issue linkages This book helps us to understand how institutions established in the 20th century are adapting to a 21st century world It will be of great interest to scholars and students of International Relations Development Studies Environmental Politics International Organizations and Global Governance as well as international officials

Just Transitions Seema Arora-Jonsson, Kavya Michael, Manish Kumar Shrivastava, 2023-10-04 This book turns critical feminist scrutiny on national climate policies in India and examines what transition might really mean for marginalized groups in the country A vision of just transitions is increasingly being used by activists and groups to ensure that pathways towards sustainable futures are equitable and inclusive Exploring this concept this volume provides a feminist study of what it would take to ensure just transitions in India where gender in relation to its interesting dimensions of power is at the centre of analysis With case studies on climate mitigation and adaptation from different parts of India the book

brings together academics practitioners and policymakers who provide commentary on sectors including agriculture forestry and renewables Overall the book has relevance far beyond India s borders as India s attempt to deal with its diverse population makes it a key litmus test for countries seeking to transition against a backdrop of inequality both in the Global North and South This volume will be of great interest to students and scholars of climate policy gender studies sustainable development and development studies more broadly

Climate Change 2014: Mitigation of Climate Change Intergovernmental Panel on Climate Change, 2015-01-26 This latest Fifth Assessment Report of the Intergovernmental Panel on Climate Change IPCC will again form the standard reference for all those concerned with climate change and its consequences including students researchers and policy makers in environmental science meteorology climatology biology ecology atmospheric chemistry and environmental policy

Governing Low-carbon Development and the Economy Hidenori Niizawa, Tōru Morotomi, 2014 Based on results of the first phase of the Kyoto Protocol which requires participating industrial countries to limit their carbon emissions this book recommends creating a global regulatory regime that would set emission targets for all nations The authors argue that once these targets and the policies for meeting them are established countries will be spurred to develop lower carbon producing economies The book discusses experiences in Japan primarily along with results from collaborative research between Japan and the Republic of Korea and comparative studies between Japan and Germany The chapters adopt different perspectives looking at the issue from the discipline of economics as well as a more sociological neo institutionalist viewpoint Publisher s description

Taking global climate governance beyond 2012, 2011 Stepping back from the pressures of the annual UNFCCC negotiation rhythm and developing a multi annual perspective on climate governance would allow policy makers to build domestic support for climate policies generate increased trust among political leaders and leverage the immense potential of ground up initiatives for the creation of a much needed global climate regime The main analytic discussion then encourages international policy makers to expand their gaze out from the engrossing year to year negotiation rhythm of the current UNFCCC COP process and to take on a multi annual perspective built around the following strategies Emphasizing the Opportunities of Climate Policy A serious and sustained effort is needed to reframe key domestic climate discussion Climate policy and energy policy Framing the climate challenge as fundamentally an issue of energy policy could focus the discussion and design of climate policies on the valuable co benefits of an energy transition The expertise and authority of national climate delegations also needs to be expanded in order to effectively manage the diversity of issues now interlaced with climate policy and the expanded framings discussed above Most of the analysis in the run up to Durban has focused on the fate of the Kyoto Protocol Bodansky 2011 and the implications of a potential even likely failure to agree on a second commitment period Financial Times

Global Climate and Energy Governance Harald L.

Heubaum,2021-12-30 Tracing the changing activities of international bureaucracies active in global climate and energy governance this book provides an in depth analysis of processes of institutional innovation and governance integration between the two fields It shows that rather than the consequence of a designed strategy governance integration the convergence of approaches and practices among different actors within one or between two or more governance architectures has come as the result of organizational changes arising from the international bureaucracies various efforts to pursue and broaden their mandate in a complex and dynamic global policy environment Each of the three cases analyzed the UNFCCC Secretariat the IEA Secretariat and the World Bank began their life focused on particular activities that today following periods of sustained organizational change make up only part of their operations Beyond creating greater synergies for cooperation across the governance architectures improving policies and mobilizing greater investment to tackle the climate emergency the book shows governance integration to have contributed to preserving and expanding the role and relevance of all three international bureaucracies This book will be of interest to students and scholars of global climate and energy governance climate policy and international organizations and their bureaucratic arms Practitioners will find this book useful in thinking about why innovation in governance emerges and how it may be directed **Taking Global**
