Globalizing L.A. Steven Erie, 2022 How do city regions successfully compete in the global age Mixing history and policy analysis Steven Erie offers a compelling account of the improbable rise of Los Angeles explaining how a region with no natural harbor and a metropolis situated a distant 20 miles from the coast managed to become the world's ninth largest economy and a leading trade and transportation center In *Globalizing L A* he argues that physical infrastructure development was a catalytic yet underappreciated factor in the transformation of L A and Southern California into a global economy provocatively challenging the conventional wisdom that emphasizes information flows intellectual property rights or social capital The book also highlights the unheralded role of local political institutions and public entrepreneurs in shaping the region's development growth and globalization Beginning with the fierce battles over railroad and harbor development in the late nineteenth century Erie chronicles L A's emergence as the nation's leading trade center and gateway to the Pacific Rim in the twentieth century The book explores recent epic battles over port development the expansion of LAX the landmark Alameda Corridor rail link and implementing NAFTA border infrastructure projects Until the 1990s the book argues L A behaved much like a city state where powerful semi autonomous development bureaucracies and entrepreneurial leaders provided the farsighted strategic planning that made these infrastructure projects possible Today Southern California faces daunting challenges from community and environmental resistance to new post 9 11 security concerns which will affect its future development and global competitiveness More Praise for *Globalizing L A* A significant new contribution to the study of urban development This book will change the way we think about Los Angeles and Southern California It is the next great book on the region David Perry Director and Professor Great Cities Institute University of Illinois at Chicago **Globalizing**

Matthew Heins, 2016-01-29 This book gives an account of how the U S freight transportation system has been impacted and globalized since the 1950s by the presence of the shipping container A globally standardized object the container carries cargo moving in international trade and it utilizes and fits within the existing transportation infrastructures of shipping trucking and railroads In this way it binds them together into a nearly seamless worldwide logistics network This process occurs not only in ocean shipping and at ports but also deep within national territories In its dependence on existing infrastructural systems though the network of container movement as it pervades domestic space is shaped by the history

and geography of the nation state This global network is not invariably imposed in a top down manner to a large degree it is cobbled together out of national regional and local systems Heins describes this in the American context examining the freight transportation infrastructures of railroads trucking and inland waterways and also the terminals where containers are transferred between train and truck The book provides a detailed historical narrative and is also theoretically informed by the contemporary literature on infrastructure and globalization
