Climate Change and Mycotoxins

Luis M. Botana, María J. Sainz, 2015-09-25 Climate Change and Mycotoxins highlights the importance of the continuous study of climate change impacts on mycotoxigenic fungi and their toxins in food and feed crops. Changing climate conditions across every geographical zone greatly affect rainfall, temperature and concentration of greenhouse gases, leading to loss in yield and quality of food crops. In outstanding contributions, the authors compile current evidence on the influence of climate change on mycotoxigenic fungi and mycotoxins in food crops pre and postharvest and during storage of food and animal feed. The chemistry and biology of toxin production is revised and an outlook on control and prevention of the toxin's impact on food and animal feed is given. The editors recommend this book to mycologists, mycotoxicologists, pathologists, epidemiologists, toxicologists, physicians, veterinarians, nutritionists, the food and feed industries, legislators, analytical chemists, microbiologists or students of these fields. Unique compilation on the impact of climate change on mycotoxins based on observed trends over the last 10 years. Special focus on the implications for food and feed safety. Latest advances on prediction and prevention of mycotoxin threats to human and animal health. About the Editors: Luis M. Botana is a full Professor of Pharmacology at the University of Santiago from 2004. 2012 director of the Department of Pharmacology and former Fogarty Fellow at the School of Medicine of the Johns Hopkins University. He has been director of the European Reference Laboratory for Marine Toxins from 2004 to 2009. He is author of 25 international patents, over 300 scientific papers and editor of 10 international books. María J. Sainz is an associate Professor of Agriculture and Forage Production and Conservation at the University of Santiago de Compostela. She has been a visiting scientist at the Rothamsted Experimental Station and for ten years head of the department of Plant Production. Her research interests focus on fungal pathogen detection and diagnostics, mycorrhizal fungi in crop protection and production, and mycotoxigenic fungi and mycotoxins on forage crops and animal feed.

Forthcoming Books

Rose Arny,1993 Reducing Disaster: Early Warning Systems For Climate Change Ashbindu Singh,Zinta Zommers,2014-05-12 Around the world extreme weather events are becoming increasingly the new normal and are expected to increase in the 21st century as a result of climate change Extreme weather events have devastating impacts on human lives and national economies This book examines ways to protect people from hazards using early warning systems and includes contributions from experts from four different continents representing 14 different universities 8 government agencies and two UN agencies Chapters detail critical components of early warning systems ways to identify vulnerable communities predict hazards and deliver information Unique satellite images illustrate the transnational impact of disasters while case studies provide detailed examples of warning systems With contributors from the fields of economics ethics meteorology geography and biology this book is essential reading for anyone interested in disaster risk reduction or climate change

**Multi-Hazard Early Warning and Disaster Risks** Dilanthi Amaratunga,Richard Haigh,Nuwan Dias,2021-09-11 This book presents a collection of papers under the theme of multi hazard early warning and disaster risks These were selected from the presentations made at the International Symposium on Tsunami and Multi Hazard Risks Early Warning and Community Awareness in supporting implementation of the Sendai Framework for Disaster Risk Reduction 2015 2030 This conference aimed to recognize achievements and to highlight work that still needs to be carried out The conference promoted collaboration among academia research institutions and disaster management offices and further encouraged multidisciplinary and multi sectoral interaction This International Symposium on Multi Hazard Early Warning and Disaster Risk Reduction provided an important opportunity to reflect upon our progress to date in tackling disaster risk but also to consider some of the challenges and opportunities that lay ahead of us A particular focus of this event was Multi Hazard Early Warning During the negotiations for the Sendai Framework countries and partners highlighted the need to

- 1 Continue to invest in develop maintain and strengthen people centred end to end early warning systems
- 2 Promote the application of simple and low cost early warning equipment and facilities
- 3 Broaden the dissemination channels for early warning

information to facilitate early action Countries also called for the further development of and investment in effective nationally compatible regional multi hazard early warning mechanisms To address these needs global Target g of the Sendai Framework was adopted namely to substantially increase the availability of and access to multi hazard early warning systems and disaster risk information and assessments to the people by 2030 As illustrated by recent events in Indonesia it is also vital to address the challenge of cascading hazards that pose a tsunami risk and the importance of linking tsunami early warning to a multi hazard environment However moving towards a multi hazard environment is complex and poses many challenges but can bring significant benefits in terms of efficiencies and also in recognising the links between hazards such as cascading threats We very much hope that this book will provide an important platform to address these and other challenges in addressing disaster risk as well as supporting implementation of the Sendai Framework for Disaster Risk Reduction
