Distributed Networked Operations The Foundations Of Network Centric Warfare:

Distributed Networked Operations Jeff Cares, 2006 Distributed Networked Operations describes a refinement of what popularly has been called network centric operations Distributed networked operations envision combat conducted by large numbers of diverse small units rather than by small numbers of generally homogenous large units In theory and to a significant extent in practice in Afghanistan and Iraq distributed networked operations involve a mixed bag of naval ground and air units none of which is individually as powerful as a fleet air wing or armored division Author Jeff Cares discusses distributed networked operations from the perspective of adaptive control theory and details implications for force structure hardware employment and networked competition Jeff presents a formal model of Information Age combat and explores the civilian business applications of the theory

Network Topology in Command and Control: Organization, Operation, and Evolution Grant, T. J., Janssen, R. H. P., Monsuur, H., 2014-05-31 Over the past decade the Command and Control C2 field has been making a transformation from top down directive command to Network Centric Operations NCO peer to peer negotiation self synchronization and agility As the terms NCO and NEC suggest C2 systems are regarded as networks rather than a hierarchy Accordingly it is appropriate to view the C2 process and C2 systems through the lens of network theory Network Topology in Command and Control Organization Operation and Evolution aims to connect the fields of C2 and network science Featuring timely research on topics pertaining to the C2 network evolution security and modeling this publication is ideal for reference use by students academicians and security professionals in the fields of C2 and network science

Battlespace Technologies Richard S. Deakin, 2010 The era of mechanized warfare is rapidly giving way to the battle for information superiority OCo enabled by electronic technologies that provide data for detailed analysis of enemy forces and capabilities Supported with over 400 four color photographs and illustrations this new book is written and designed specifically to help non specialists quickly understand the complexities of Network Enabled Capability NEC It offers you expert guidance on how to achieve information dominance throughout the battlespace by effectively employing the technologies concepts and decision making processes of network enabled warfare Written in clear nontechnical language with minimum mathematics the book explains how to use sensor technologies including radar and electronic warfare systems to disseminate information to key decision makers in timely and relevant manner You learn how these technologies allow for the effective acquisition and dissemination of intelligence while denying the collection dissemination and use of intelligence by enemy forces Providing a complete understanding of the advantages and weaknesses of information warfare this practical book shows you what factors need to be taken into account when designing systems and equipment for use in a network enabled environment Moreover this forward looking reference explores what evolving requirements to consider for future air land and sea battlespace scenarios This is an extraordinarily valuable and useful resource for military staff defense industry engineers and managers and government officials involved with defense funding decisions

Fighting the Fleet Jeffrey R

Cares, Anthony Cowden, 2020-12-15 *Fighting the Fleet* recognizes that fleets conduct four distinct but interlocking tasks at the operational level of war striking screening scouting and basing and that successful operational art is achieved when they are brought to bear in a cohesive competitive scheme In explaining these elements and how they are conjoined for advantage a central theme emerges despite the utility and importance of jointness among the armed forces the effective employment of naval power requires a specialized language and understanding of naval concepts that is often diluted or completely lost when too much jointness is introduced Woven into the fabric of the book are the fundamental principles of three of the most important naval theorists of the twentieth century Rear Admiral Bradley Fiske Rear Admiral J C Wylie and Captain Wayne Hughes While Cares and Cowden advocate the reinvigoration of combat theory and the appropriate use of operations research they avoid over theorizing and have produced a practical guide that empowers fleet planners to wield naval power appropriately and effectively in meeting today's operational and tactical challenges

Emerging Technologies and International Stability Todd S. Sechser, Neil Narang, Caitlin Talmadge, 2021-11-28 Technology has always played a central role in international politics it shapes the ways states fight during wartime and compete during peacetime Today rapid advancements have contributed to a widespread sense that the world is again on the precipice of a new technological era Emerging technologies have inspired much speculative commentary but academic scholarship can improve the discussion with disciplined theory building and rigorous empirics This book aims to contribute to the debate by exploring the role of technology both military and non military in shaping international security Specifically the contributors to this edited volume aim to generate new theoretical insights into the relationship between technology and strategic stability test them with sound empirical methods and derive their implications for the coming technological age This book is very novel in its approach It covers a wide range of technologies both old and new rather than emphasizing a single technology Furthermore this volume looks at how new technologies might affect the broader dynamics of the international system rather than limiting the focus to a stability The contributions to this volume walk readers through the likely effects of emerging technologies at each phase of the conflict process The chapters begin with competition in peacetime move to deterrence and coercion and then explore the dynamics of crises the outbreak of conflict and war escalation in an environment of emerging technologies The chapters in this book except for the Introduction and the Conclusion were originally published in the *Journal of Strategic Studies*

Navy Strategic Culture Roger W. Barnett, 2009 To provide readers with insights into how naval officers think about how to conduct naval warfare retired naval officer and Naval War College professor Emeritus Roger Barnett opens the oceangoing service for inspection He attributes the unstructured at sea environment with powerfully conditioning an officer's way of thinking explaining that the watery setting forces them to be constantly alert self reliant and willing to take risks In characterizing the culture he describes an expeditionary mindset underwritten by history and nourished by experience that sets naval officers apart from the other branches of the military Barnett shows how officers think about the theory and the

practice of warfare in oceanic and littoral contexts In his examination he clearly demonstrates the unequivocal successes wrought by the culture over the centuries as naval officers met the challenges posed by the conduct of warfare on under over and from the seas Battlespace Digitization and Network-centric Systems III Raja Suresh,2003 United States Naval Institute Proceedings ,2003 **Jane's International Defense Review** ,2003 *Naval Power in the Twenty-first Century* Peter J.
