**An Introduction to General Relativity** L. P. Hughston,K. P. Tod,1990 This textbook provides an introduction to general relativity for mathematics undergraduates or graduate physicists After a review of Cartesian tensor notation and special relativity the concepts of Riemannian differential geometry are introduced More emphasis is placed on an intuitive grasp of the subject and a calculational facility than on a rigorous mathematical exposition General relativity is then presented as a relativistic theory of gravity reducing in the appropriate limits to Newtonian gravity or special relativity The Schwarzschild solution is derived and the gravitational red shift time dilation and classic tests of general relativity are discussed There is a brief account of gravitational collapse and black holes based on the extended Schwarzschild solution Other vacuum solutions are described motivated by their counterparts in linearised general relativity The book ends with chapters on cosmological solutions to the field equations There are exercises attached to each chapter some of which extend the development given in the text

**The Art of Modeling in Science and Engineering with Mathematica** Diran Basmadjian,2019-07-17 Modeling is practiced in engineering and all physical sciences Many specialized texts exist written at a high level that cover this subject However students and even professionals often experience difficulties in setting up and solving even the simplest of models This can be attributed to three difficulties the proper choice of model the absence of precise solutions and the necessity to make suitable simplifying assumptions and approximations Overcoming these difficulties is the focus of The Art of Modeling in Science and Engineering The text is designed for advanced undergraduate and graduate students and practicing professionals in the sciences and engineering with an interest in Modeling based on Mass Energy and Momentum or Force Balances The book covers a wide range of physical processes and phenomena drawn from chemical mechanical civil environmental sciences and bio sciences A separate section is devoted to real World industrial problems The author explains how to choose the simplest model obtain an appropriate solution to the problem and make simplifying assumptions approximations
