*Visualization* Benjamin B. Bederson, Ben Shneiderman, 2003-05-22 Since the beginning of the computer age researchers from many disciplines have sought to facilitate people's use of computers and to provide ways for scientists to make sense of the immense quantities of data coming out of them. One gainful result of these efforts has been the field of information visualization whose technology is increasingly applied in scientific research, digital libraries, data mining, financial data analysis, market studies, manufacturing, production control, and data discovery. This book collects 38 of the key papers on information visualization from a leading and prominent research lab, the University of Maryland's Human Computer Interaction Lab (HCIL). Celebrating HCIL's 20th anniversary, this book presents a coherent body of work from a respected community that has had many success stories with its research and commercial spin-offs. Each chapter contains an introduction specifically written for this volume by two leading HCI researchers to describe the connections among those papers and reveal HCIL's individual approach to developing innovations. Presents key ideas, novel interfaces, and major applications of information visualization tools embedded in inspirational prototypes. Techniques can be widely applied in scientific research, digital libraries, data mining, financial data analysis, business, market studies, manufacturing, production control, drug discovery, and genomic studies. Provides an insider view to the scientific process and evolution of innovation as told by the researchers themselves. This work comes from the prominent and high-profile University of Maryland's Human Computer Interaction Lab.

**Developing a Cybersecurity Immune System for Industry 4.0** Sergei Petrenko, 2022-09-01 Cyber immune systems try to mimic the adaptive immune system of humans and animals because of its capability to detect and fend off new unseen pathogens. Today's current cyber security systems provide an effective defense mechanism against known cyber attacks but are not so good when it comes to defending against unknown attacks. This book describes the possible development and organization of self-healing computing based on cyber immunity techniques and aimed at working in the new realm of Industry 4.0. Industry 4.0 is the trend towards automation and data exchange in manufacturing technologies and processes which include cyber-physical systems (CPS), the Internet of Things (IoT), industrial Internet of Things (IIoT), cloud computing, cognitive computing, and artificial intelligence. The book describes the

author's research and development of cyber immunity systems that will prevent the destruction of critical information infrastructure by future unknown cyber attacks and thus avoid the significant or catastrophic consequences of such attacks. The book is designed for undergraduate and post graduate students for engineers in related fields as well as managers of corporate and state structures, chief information officers (CIO), chief information security officers (CISO), architects and research engineers in the field of cybersecurity. This book contains four chapters: 1. Cyber Immunity Concept of the Industry 4.0, 2. Mathematical Framework for Immune Protection of Industry 4.0, 3. Trends and prospects of the development of Immune Protection of Industry 4.0, 4. From detecting cyber attacks to self-healing Industry 4.0.
