Evolutionary Psychology Christopher Badcock, 2013-05-31 Evolutionary Psychology A Critical Introduction According to evolutionary biologists we are the minders of our genes But as Christopher Badcock points out in this book it is only recently that

evolutionists have realized that minders need minds and that evolution needs psychology to fill the yawning gap between genes and behaviour Evolutionary Psychology assumes no prior knowledge of the subject and concentrates on the fundamental issues raised by the application of modern Darwinism to psychology Basic concepts of evolution are explained carefully so that the reader has a sound grasp of them before their often controversial application to psychology is discussed The approach is a critical one and the author does not hide the many difficulties that evolutionary psychology raises Examples include the strange neglect of Darwin's own writings on psychology and the fact that no existing theory has succeeded in explaining why the human brain evolved in the first place The book is the first to give a non technical account of remarkable new findings about the roles that conflicting genes play in building different parts of the brain It is also the first to consider the consequences of this for controversies like those over nature nurture IQ brain lateralization and consciousness Evolutionary Psychology is based on many years experience of teaching evolution and psychology to social science students and is intended for all who wish to get to grips with the basic issues of one of the most exciting and rapidly growing areas of modern science
