Applied Remote Sensing for Urban Planning, Governance and Sustainability Maik Netzband, William L.

Stefanov, Charles Redman, 2007-12-10 Despite the promising and exciting possibilities presented by new and fast developing remote sensing technologies applied to urban areas there is still a gap perceived between the generally academic and research focused spectrum of results offered by the urban remote sensing community and the application of these data and products by the local governmental bodies of urban cities and regions While there is no end of interesting science questions that we can ask about cities sometimes these questions don't match well with what the operational problems and concerns of a given city are The authors present data from six urban regions from all over the world They explain what the important questions are and how one can use data and scientific skills to help answer them *Hydrologic Modeling* Vijay P

Singh, Shalini Yadav, Ram Narayan Yadava, 2018-01-19 This book contains seven parts The first part deals with some aspects of rainfall analysis including rainfall probability distribution local rainfall interception and analysis for reservoir release Part 2 is on evapotranspiration and discusses development of neural network models errors and sensitivity Part 3 focuses on various aspects of urban runoff including hydrologic impacts storm water management and drainage systems Part 4 deals with soil erosion and sediment covering mineralogical composition geostatistical analysis land use impacts and land use mapping Part 5 treats remote sensing and geographic information system GIS applications to different hydrologic problems Watershed runoff and floods are discussed in Part 6 encompassing hydraulic experimental and theoretical aspects Water modeling constitutes the concluding Part 7 Soil and Water Assessment Tool SWAT Xinanjiang and Soil Conservation Service Curve Number SCS CN models are discussed The book is of interest to researchers and practitioners in the field of water resources hydrology environmental resources agricultural engineering watershed management earth sciences as well as those engaged in natural resources planning and management Graduate students and those wishing to conduct further research in water and environment and their development and management find the book to be of value **Urban Ecology**

John Marzluff, Eric Shulenberger, Wilfried Endlicher, Marina Alberti, Gordon Bradley, Clare Ryan, Craig ZumBrunnen, Ute Simon, 2008-01-03 Urban Ecology is a rapidly growing field of academic and practical significance Urban ecologists have published several conference proceedings and regularly contribute to the ecological architectural planning and geography literature However important papers in the field that set the foundation for the discipline and illustrate modern approaches from a variety of perspectives and regions of the world have not been collected in a single accessible book Foundations of Urban Ecology does this by reprinting important European and American publications filling gaps in the published literature with a few targeted original works and translating key works originally published in German This edited volume will provide students and professionals with a rich background in all facets of urban ecology The editors emphasize the drivers patterns processes and effects of human settlement The papers they synthesize provide readers with a broad understanding of the

local and global aspects of settlement through traditional natural and social science lenses This interdisciplinary vision gives the reader a comprehensive view of the urban ecosystem by introducing drivers patterns processes and effects of human settlements and the relationships between humans and other animals plants ecosystem processes and abiotic conditions The reader learns how human institutions health and preferences influence and are influenced by the others members of their shared urban ecosystem
