Stirling Numbers Elena Deza, 2023-10 Stirling numbers are one of the most known classes of special numbers in Mathematics especially in Combinatorics and Algebra They were introduced by Scottish mathematician James Stirling 1692 1770 in his most important work Differential Method with a Tract on Summation and Interpolation of Infinite Series 1730 Stirling numbers have rich history many arithmetic number theoretical analytical and combinatorial connections numerous classical properties as well as many modern applications This book collects together much of the scattered material on the two subclasses of Stirling numbers to provide a holistic overview of the topic From the combinatorial point of view Stirling numbers of the second kind  $S(n, k)$  count the number of ways to partition a set of  $n$  different objects into a given  $n$  set into  $k$  non empty subsets Stirling numbers of the first kind  $s(n, k)$  give the number of permutations of  $n$  elements with  $k$  disjoint cycles Both subclasses of Stirling numbers play an important role in Algebra they form the coefficients connecting well known sets of polynomials This book is suitable for students and professionals providing a broad perspective of the theory of this class of special numbers and many generalizations and relatives of Stirling numbers including Bell numbers and Lah numbers Throughout the book readers are presented with exercises to test and cement their understanding Stirling Numbers John Winfred Stamey, 1980 *Catalan Numbers* Elena Deza, 2024-12-27 Catalan numbers named after the French Belgian mathematician Eugène Charles Catalan 1814 1894 arise in a variety of combinatorial problems They have many interesting properties a rich history and numerous arithmetic number theoretical analytical and combinatorial connections as well as a variety of classical and modern applications Considering the long list of open problems and questions related to the classical case its relatives Bell numbers Motzkin numbers Narayana numbers etc and its generalizations this book provides a broad perspective on the theory of this class of special numbers that will be of interest to professionals students and a general audience The book begins with the history of the problem before defining the considered numerical sets The recurrence equation closed formula and generating function are then presented followed by the simplest properties and number theoretical properties Later chapters discuss the relationships between Catalan numbers and other special numbers as well as their applications and open problems *Stirling Numbers Identities Obtained from Circulant Permanent Expansions* CHARLES L.
