World Wide Weed Tom Decorte, 2016-02-11 For the majority of its history the cultivation of cannabis did not stand out at least compared to the cultivation of other illegal plants Cannabis plantations like coca bush or opium poppy plantations were typically large in size grown by local farmers in a handful of developing producing countries processed and then exported to industrial consuming nations While cocaine and heroin are still produced in a handful of developing countries cannabis cultivation is increasingly universal From Europe to the Americas and Oceania import substitution in cannabis markets has been noticed in almost every developed country around the world with a notable aversion for discrimination Geographical technological cultural and economic factors help to explain why indoor and outdoor domestic cultivation is well established and why the nature and extent of cultivation varies so dramatically across the western developed nations As we start the second decade of the 21st century the new cannabis industry continues to fascinate both casual and academic observers of the drug scene Researchers around the world have become increasingly interested in the phenomenon aiming to describe and potentially explain the rapid switch from importation to domestic production in their own countries In bringing together some of the world's leading experts on cannabis cultivation this book contains sixteen chapters that take an interdisciplinary look at global trends in cannabis cultivation It will serve as an exemplar for wider discussions of key theories and concepts relating to the spread not just of cannabis cultivation but also of illegal markets more generally the actors that operate within these markets and the policies and practices that are employed in response to developments within these markets
