Electromagnetic Field

Computation by Network Methods Leopold B. Felsen, Mauro Mongiardo, Peter Russer, 2009-03-05 In this monograph the authors propose a systematic and rigorous treatment of electromagnetic field representations in complex structures The architecture suggested in this book accommodates use of different numerical methods as well as alternative Green's function representations in each of the subdomains resulting from a partitioning of the overall problem The subdomains are regions of space where electromagnetic energy is stored and are described in terms of equivalent circuit representations based either on lumped element circuits or on transmission lines Connection networks connect the subcircuits representing the subdomains The connection networks are lossless don't store energy and represent the overall problem topology This is similar to what is done in circuit theory and permits a phrasing of the solution of EM field problems in complex structures by Network oriented methods

Computational Electromagnetics—Retrospective and Outlook Iftikhar Ahmed, Zhizhang (David) Chen, 2014-08-27 The book will cover the past present and future developments of field theory and computational electromagnetics The first two chapters will give an overview of the historical developments and the present the state of the art in computational electromagnetics These two chapters will set the stage for discussing recent progress new developments challenges trends and major directions in computational electromagnetics with three main emphases a Modeling of ever larger structures with multi scale dimensions and multi level descriptions behavioral circuit network and field levels and transient behaviours b Inclusions of physical effects other than electromagnetic quantum effects thermal effects mechanical effects and nano scale features c New developments in available computer hardware programming paradigms MPI Open MP CUDA and Open CL and the associated new modeling approaches These are the current emerging topics in the area of computational electromagnetics and may provide readers a comprehensive overview of future trends and directions in the area The book is written for students research scientists professors design engineers and consultants who engaged in the fields of design analysis and research of the emerging technologies related to computational electromagnetics RF microwave optimization new numerical methods as well as accelerator simulator dispersive materials nano antennas nano waveguide nano electronics terahertz applications bio medical and material sciences The book may also be used for those involved in commercializing electromagnetic and related emerging technologies sensors and the semiconductor industry The book can be used as a reference book for graduates and post graduates It can also be used as a text book for workshops and continuing education for researchers and design engineers

Electromagnetics and Network Theory and their Microwave Technology Applications Stefan Lindenmeier, Robert Weigel, 2011-07-13 This volume provides a discussion of the challenges and perspectives of electromagnetics and network theory and their microwave applications in all aspects It collects the most interesting contribution of the symposium dedicated to Professor Peter Russer held in October 2009 in

Munich Complex Networks & Their Applications V Hocine Cherifi, Sabrina Gaito, Walter Quattrociocchi, Alessandra Sala, 2016-11-25 This book highlights cutting edge research in the field of network science offering scientists researchers and graduate students a unique opportunity to catch up on the latest advances in theory and a multitude of applications It presents the peer reviewed proceedings of the fifth International Workshop on Complex Networks Network measures Community structure Network dynamics Diffusion epidemics and spreading processes Resilience and control Network visualization Social and political networks Networks in finance and economics Biological and ecological networks and Network analysis

Network-Oriented Modeling Jan Treur, 2016-10-03 This book presents a new approach that can be applied to complex integrated individual and social human processes It provides an alternative means of addressing complexity better suited for its purpose than and effectively complementing traditional strategies involving isolation and separation assumptions Network oriented modeling allows high level cognitive affective and social models in the form of cyclic graphs to be constructed which can be automatically transformed into executable simulation models The modeling format used makes it easy to take into account theories and findings about complex cognitive and social processes which often involve dynamics based on interrelating cycles Accordingly it makes it possible to address complex phenomena such as the integration of emotions within cognitive processes of all kinds of internal simulations of the mental processes of others and of social phenomena such as shared understandings and collective actions A variety of sample models including those for ownership of actions fear and dreaming the integration of emotions in joint decision making based on empathic understanding and evolving social networks illustrate the potential of the approach Dedicated software is available to support building models in a conceptual or graphical manner transforming them into an executable format and performing simulation experiments The majority of the material presented has been used and positively evaluated by undergraduate and graduate students and researchers in the cognitive social and AI domains Given its detailed coverage the book is ideally suited as an introduction for graduate and undergraduate students in many different multidisciplinary fields involving cognitive affective social biological and neuroscience domains

Numerical Methods in Electromagnetics W.H.A. SCHILDERS, E.J.W. TER MATEN, 2005-04-04 This special volume provides a broad overview and insight in the way numerical methods are being used to solve the wide variety of problems in the electronics industry Furthermore its aim is to give researchers from other fields of application the opportunity to benefit from the results which have been obtained in the electronics industry Complete survey of numerical methods used in the electronic industry Each chapter is selfcontained Presents state of the art applications and methods Internationally recognised authors

Computational Electromagnetics Zoltan J. Cendes, 1986 **Applications of Neural Networks in Electromagnetics** Christos Christodoulou, Michael Georgiopoulos, 2001 The high speed capabilities and learning abilities of neural networks can be applied to quickly solving numerous complex optimization problems in electromagnetics and this book shows you how Even if you have no background in neural networks this book helps you understand the basics of each main network architecture in use today including its strengths and limitations Moreover it gives you the knowledge you need to identify situations when the use of neural networks is the best problem solving option **Computational Magnetics** Jan Sykulski, 1995 This book fills the gap between theory available computational techniques and engineering practice in the design of electrical and electromechanical machines The theory underlying all currently recommended computational and experimental methods is covered comprehensively including field analysis and synthesis magnetic fields coupled to stress and thermal fields The book is very practically oriented and includes many examples of actual solutions to real devices

Field Computation by Moment Methods Roger F. Harrington, 1982 An IEEE reprinting of this classic 1968 edition FIELD COMPUTATION BY MOMENT METHODS is the first book to explore the computation of electromagnetic fields by the most popular method for the numerical solution to electromagnetic field problems It presents a unified approach to moment methods by employing the concepts of linear spaces and functional analysis Written especially for those who have a minimal amount of experience in electromagnetic theory this book illustrates theoretical and mathematical concepts to prepare all readers with the skills they need to apply the method of moments to new engineering related problems Written especially for those who have a minimal amount of experience in electromagnetic theory theoretical and mathematical concepts are illustrated by examples that prepare all readers with the skills they need to apply the method of moments to new engineering related problems *Magnetic Field Computation with R-functions* Amália Iványi, 1998 In this text the new results on simulation and implementation of magnetic hysteresis to the numerical analysis of the electromagnetic field problems are summarized The 1989 URSI International Symposium on Electromagnetic Theory ,1989 *Electrical and Power Systems Modelling and Simulation* J. Robert, W. Midvidy, 1989 **12th IMACS World Congress, July 18-22, 1988, Paris, France** Robert Vichnevetsky, Pierre Borne, J. Vignes, 1988 **Computational Electrodynamics** Allen Taflov, 1995 This work represents a university text and professional research reference on the finite difference time domain computational solution method for Maxwell's equations Sections cover numerical stability numerical dispersion and dispersive nonlinear and gain methods of FD TD and antenna analysis **Beijing International Conference on Electrical Machines, August 10-14, 1987, Beijing, China** ,1987 IEEE Circuits & Devices ,2006 *Masters Theses in the Pure and Applied Sciences* Wade H. Shafer, 1996-04-30 Masters Theses in the Pure and Applied Sciences was first conceived published and disseminated by the Center for Information and Numerical Data Analysis and Synthesis CINDAS at Purdue University in 1957 starting its coverage of theses with the academic year 1955 Beginning with Volume 13 the printing and dissemination phases of the

activity were transferred to University Microfilms Xerox of Ann Arbor Michigan with the thought that such an arrangement would be more beneficial to the academic and general scientific and technical community After five years of this joint undertaking we had concluded that it was in the interest of all concerned if the printing and distribution of the volumes were handled by an international publishing house to assure improved service and broader dissemination Hence starting with Volume 18 Masters Theses in the Pure and Applied Sciences has been disseminated on a worldwide basis by Plenum Publishing Corporation of New York and in the same year the coverage was broadened to include Canadian universities All back issues can also be ordered from Plenum We have reported in Volume 39 thesis year 1994 a total of 13 953 thesis titles from 21 Canadian and 159 United States universities We are sure that this broader base for these titles reported will greatly enhance the value of this important annual reference work While Volume 39 reports theses submitted in 1994 on occasion certain universities do report theses submitted in previous years but not reported at the time
