capricious they are influenced by the author's perspective. In addition, I have made some attempt where validated resources exist to present my perspective on how individual personalities and their particular contextual experience influenced the direction in which they carried the science or the science carried them. The book is divided into an introduction and five chapters which this author views as one of the many possible delineations that could be employed to trace the progress of the technology. The introduction gives a broad overview of the technology, the components covered, progression of the science, present applications, and future prospects. Chapter one covers the prehistory which of its essence involves some conjecture in addition to supported data. There are many potential starting points but I choose our agricultural roots since, as noted anthropologist Solomon Katz asserts, the domestication of plant and animals presaged civilization. **Architecture, Animal, Human** Catherine T.
