Ergodic Theory And Fractal Geometry Cbms Regional Conference Series In Mathematics:

Ergodic Theory and Fractal Geometry Harry Furstenberg, 2014 Notes based on a series of lectures delivered at Kent State University in 2011 Preface **Ergodic Theory and Fractal Geometry** Hillel Furstenberg, 2014-08-08 Fractal geometry represents a radical departure from classical geometry which focuses on smooth objects that straighten out under magnification Fractals which take their name from the shape of fractured objects can be characterized as retaining their lack of smoothness under magnification The properties of fractals come to light under repeated magnification which we refer to informally as zooming in This zooming in process has its parallels in dynamics and the varying scenery corresponds to the evolution of dynamical variables The present monograph focuses on applications of one branch of dynamics ergodic theory to the geometry of fractals Much attention is given to the all important notion of fractal dimension which is shown to be intimately related to the study of ergodic averages It has been long known that dynamical systems serve as a rich source of fractal examples The primary goal in this monograph is to demonstrate how the minute structure of fractals is unfolded when seen in the light of related dynamics A co publication of the AMS and CBMS Assouad Dimension and Fractal Geometry Jonathan M. Fraser, 2020-10-29 The first thorough treatment of the Assouad dimension in fractal geometry with applications to many fields within pure mathematics **An Invitation to Fractal Geometry** Michel L. Lapidus, Goran Radunović, 2024-12-30 This book offers a comprehensive exploration of fractal dimensions self similarity and fractal curves Aimed at undergraduate and graduate students postdocs mathematicians and scientists across disciplines this text requires minimal prerequisites beyond a solid foundation in undergraduate mathematics While fractal geometry may seem esoteric this book demystifies it by providing a thorough introduction to its mathematical underpinnings and applications Complete proofs are provided for most of the key results and exercises of different levels of difficulty are proposed throughout the book Key topics covered include the Hausdorff metric Hausdorff measure and fractal dimensions such as Hausdorff and Minkowski dimensions The text meticulously constructs and analyzes Hausdorff measure offering readers a deep understanding of its properties Through emblematic examples like the Cantor set the Sierpinski gasket the Koch snowflake curve and the Weierstrass curve readers are introduced to self similar sets and their construction via the iteration of contraction mappings The book also sets the stage for the advanced theory of complex dimensions and fractal drums by gently introducing it via a variety of classical examples including well known fractal curves By intertwining historical context with rigorous mathematical exposition this book serves as both a stand alone resource and a gateway to deeper explorations in fractal geometry The Abel Prize 2018-2022 Helge Holden, Ragni Piene, 2024-04-25 The book presents the winners of the Abel Prize in mathematics for the period 2018 2022 Robert P Langlands 2018 Karen K Uhlenbeck 2019 Hillel Furstenberg and Gregory Margulis 2020 L szlo L v sz and Avi Wigderson 2021 Dennis P Sullivan 2022 The profiles feature autobiographical information as well as a scholarly description of each mathematician s work In addition each profile contains a Curriculum

Vitae a complete bibliography and the full citation from the prize committee The book also includes photos from the period 2018 2022 showing many of the additional activities connected with the Abel Prize This book follows on The Abel Prize 2003 2007 The First Five Years Springer 2010 and The Abel Prize 2008 2012 Springer 2014 as well as on The Abel Prize 2013 2017 Springer 2019 which profile the previous Abel Prize laureates

Recent Developments in Fractal Geometry and Dynamical Systems Sangita Jha, Mrinal Kanti

Roychowdhury, Saurabh Verma, 2024-04-18 This volume contains the proceedings of the virtual AMS Special Session on Fractal Geometry and Dynamical Systems held from May 14 15 2022 The content covers a wide range of topics It includes nonautonomous dynamics of complex polynomials theory and applications of polymorphisms topological and geometric problems related to dynamical systems and also covers fractal dimensions including the Hausdorff dimension of fractal interpolation functions Furthermore the book contains a discussion of self similar measures as well as the theory of IFS measures associated with Bratteli diagrams This book is suitable for graduate students interested in fractal theory researchers interested in fractal geometry and dynamical systems and anyone interested in the application of fractals in science and engineering This book also offers a valuable resource for researchers working on applications of fractals in different fields

Ergodic Theory, Groups, and Geometry Robert J. Zimmer, Dave Witte Morris, 2008 The study of group

actions on manifolds is the meeting ground of a variety of mathematical areas In particular interesting geometric insights can be obtained by applying measure theoretic techniques This book provides an introduction to some of the important methods major developments and open problems in the subject It is slightly expanded from lectures given by Zimmer at the CBMS conference at the University of Minnesota The main text presents a perspective on the field as it was at that time Comments at the end of each chapter provide selected suggestions for further reading including references to recent developments

BOOK JACKET **Symbolic Dynamics and its Applications** Susan G. Williams, 2004 Symbolic dynamics originated as a tool for analyzing dynamical systems and flows by discretizing space as well as time The development of information theory gave impetus to the study of symbol sequences as objects in their own right Today symbolic dynamics has expanded to encompass multi dimensional arrays of symbols and has found diverse applications both within and beyond mathematics This volume is based on the AMS Short Course on Symbolic Dynamics and its Applications It contains introductory articles on the fundamental ideas of the field and on some of its applications Topics include the use of symbolic dynamics techniques in coding theory and in complex dynamics the relation between the theory of multi dimensional systems and the dynamics of tilings and strong shift equivalence theory Contributors to the volume are experts in the field and are clear expositors The book is suitable for graduate students and research mathematicians interested in symbolic dynamics and its applications
