**Nutrition for Team and Individual Sport Athletes** Justin Roberts, Alvaro López Samanes, Gina Trakman, 2024-12-12 Sports nutrition together with training recovery genetics and environmental considerations represent key factors for achieving high performance on the sports field In recent years there has been an increased interest in the potential of novel dietary strategies e.g. periodized nutrition and dietary supplements ergogenic aids to improve individual and team sports athletes performance However the majority of the research in the sports nutrition field has been conducted in endurance or high intensity sports highlighting the need for specific information and collaborative strategies to support nutritional knowledge and targeted dietary supplementation strategies to inform and support other athletes The aim of this Research Topic is to provide current findings about the benefits associated with using nutritional interventions and/or dietary supplements ergogenic aids on supporting or enhancing sports performance with focus on these applications in real world sports contexts e.g. competition training situations etc Studies that focus on novel interventions supplements are encouraged Likewise studies that report on outcomes related to previously proven supplements interventions but in an athlete sub population where limited published literature exists will be considered favorably

**Physiological and Functional Assessment of Professional Football Players** Moisés de Hoyo, Borja Sañudo, Redha Taiar, Luis Carrasco Páez, 2025-05-09 *Physiological and Functional Assessment of Professional Football Players* presents a science based approach to enhance athletes performance and prevent muscle injuries Professional football players undergo a rigorous competitive season with frequent and numerous competitions exposing them to significant stress that can detrimentally affect their performance and lead to serious injuries in extreme cases In order to avert such negative outcomes coaches and team staff must formulate preventive training programs tailored to the unique characteristics and needs of each player The execution of these individualized training programs necessitates a comprehensive assessment of players health status evaluation of their functional and fitness performance analysis of their

muscular structure identification of muscle imbalances or movement dysfunctions and detection of potential injury risk factors Furthermore it is imperative to monitor the weekly training and competition load using appropriate indicators of external and internal load adjusting workloads accordingly In addition recovery training programs must be meticulously designed for each injured player This process involves isolating the factors causing the injury and assessing the injury s severity in the initial stage Subsequently recovery training programs must be thoughtfully planned incorporating various assessment tools and procedures to verify the restoration of players functional ability and inform decisions about the return to play Physiological and Functional Assessment of Professional Football Players delves into the utilization of appropriate testing protocols and emphasizes that understanding the reported data is crucial for the success of professional football training This groundbreaking book is essential reading for researchers and practitioners in the fields of soccer sports science recovery data and performance analysis and soccer coaching Going Long Joe Friel,Gordon Byrn,2025-11-04
