

A detailed botanical illustration of a Carex plant. The central part shows the plant's base with several long, thin, grass-like leaves emerging from a dense, dark brown root system. To the left, a large, green, textured leaf is shown in detail. To the right, a cluster of yellow and red flower spikes is depicted. Thin black lines connect the title and subtitle to specific parts of the plant, such as the leaves and the flower spikes.

Johnston,2001 **Sedges of North America** Steve W. Chadde,2000-08 *Sedges* Robert H. Mohlenbrock,2001-07-18 This second edition of Sedges Cyperus to Scleria brings up to date the identification of species of sedges in Illinois except Carex since publication of the first edition in 1976 During the intervening years several

additions to the sedge flora of Illinois have been made and many new distributional records have been added. Also a large number of nomenclatural changes have taken place resulting in several alterations of scientific names. New illustrations have been provided for all of the additions. In his introductory material Robert H. Mohlenbrock discusses the morphology of sedges and the habitats where they can be found. Although the semitechnical keys and descriptions are familiar to experienced botanists, he has simplified them as much as possible to accommodate the novice in sedge identification. He has also included a new key to the sedges and to each genus in which additional species have been added. For each species, Mohlenbrock has provided a description, statement of habitat and range, Illinois distribution map, discussion of synonymy, and line illustrations showing its diagnostic features. *Sedges Cyperus to Scleria* contains 128 illustrations. This field guide presents the key features and detailed descriptions and summarizes the ecology and statewide distribution for each species. This guide also uses narratives and keys with side-by-side color photographs to help users identify similar looking species. Page 4 de la couverture. **Illustrations of the Genus Carex ...** Francis Boott, 1860. **Cyperaceae** Robert H. Mohlenbrock, 2005-06-09. The first in a series of four illustrated guides to identifying aquatic and standing water plants in the central Midwest, this convenient reference volume covers the 183 species of Cyperaceae. Robert H. Mohlenbrock includes three types of plants: submergents (those that spend their entire lives with their vegetative parts either completely submerged or at least floating on the water's surface), emergents (which are typically rooted underwater with their vegetative parts standing out of water), and a third category of plants that live most of their lives out of water but which may live in water at least three months a year. Mohlenbrock provides descriptions, illustrations, and ways to identify any plant in the sedge family Cyperaceae in the states of Kentucky except for the Cumberland region, Ohio, Indiana, Illinois, Iowa, Missouri, Kansas, and Nebraska. With taxa arranged alphabetically, the volume is well organized and easy to use. In addition, basic synonymy, description, distribution, comments, and line drawings that show the habits and distinguishing features for each plant, habitat, and nomenclatural notes are also listed, as are the official wetland designations given by the U.S. Fish and Wildlife Service. Cyperaceae is a useful standard reference for state and federal employees who deal with aquatic and wetland plants and environmental conservation and mitigation issues, and an essential guide for students and instructors in college and university courses where the identification of aquatic and wetland plants is emphasized. **Cyperaceae of Nevada** Frederick Joseph Hermann, 1940. **Studies in the Cyperaceae** Theodore Holm, 1903.
