ANGLED (APC) CONNECTORS

APC connectors are typically dark green and feature an 8° angled end face. The angled construction provides less overall loss and is ideal for outside plant, demarcation wiring, internet broadband and other high optical wavelength applications.

Before the modem, use APC connectors.
After the modem, use UPC connectors.

TROUBLESHOOTING CONNECTIONS

Check connection polarity. If using a duplex connection (two strands), swap the connections. Most fiber signals rely on separate transmit and receive paths.

Check your connectors. Is a connector loose? Often re-terminating solves the issue.

Check your connections. Is a connection or patch point loose or dirty? How many inline connections are in the run? Too many connections can cause too much signal loss.

Clean your connections. Remove dirt, dust and oil from fingerprints with pen-style cleaners or alcohol wipes.

Check for breaks. Identify cable damage using a VFL or OTDR cable tester. When identified, re-splice the cable.

Check your cable distance. Multimode fiber has a typical maximum distance of 300m / 1000 feet. Longer runs require single mode fiber.

Check compatibility. Some devices, especially AV over fiber extenders, are specific to either multimode or single mode fiber. Ensure the installed cable matches the device requirements.
