Field Evaluation In The Intelligence And Counterintelligence Context Workshop Summary:

Field Evaluation in the Intelligence and Counterintelligence Context National Research Council, Division of Behavioral and Social Sciences and Education, Board on Behavioral, Cognitive, and Sensory Sciences, Planning Committee on Field Evaluation of Behavioral and Cognitive Sciences-Based Methods and Tools for Intelligence and Counterintelligence, 2010-03-16 On September 22-23, 2009, the National Research Council held a workshop on the field evaluation of behavioral and cognitive sciences based methods and tools for use in the areas of intelligence and counterintelligence. Broadly speaking, the purpose of the workshop was to discuss the best ways to take methods and tools from behavioral science and apply them to work in intelligence operations. More specifically, the workshop focused on the issue of field evaluation: the testing of these methods and tools in the context in which they will be used in order to determine if they are effective in real world settings. This book is a summary and synthesis of the two days of presentations and discussions that took place during the workshop. The workshop participants included invited speakers and experts from a number of areas related to the behavioral sciences and the intelligence community. The discussions covered such ground as the obstacles to field evaluation of behavioral science tools and methods, the importance of field evaluation, and various lessons learned from experience with field evaluation in other areas. *Behavioral Science and Security* United States Congress, House, Committee on Science, Space, and Technology (2011). Subcommittee on Investigations and Oversight, 2011

The Logic of Intelligence Analysis Karl Spielmann, 2018-06-12 This book discusses the application of hypothesis testing to the practice of intelligence analysis. By drawing on longstanding procedures of scientific method, particularly hypothesis testing, this book strongly critiques standard intelligence analytic practices. It shows these practices to be inadequate as they are illogical in terms of what formal philosophy says any intelligence analysts can realistically be expected to know and for the future when analysts will face pressures to adapt to digital age modeling techniques. The methodology focuses on identifying and remedying analytic errors caused by analyst cognitive biases and by foreign denial and deception. To demonstrate that it is a practical tool, it walks analysts through a case study step by step to show how its hypothesis testing can be implemented. It also invites a comparative test in the real world with any other intelligence methodologies to assess its strengths and weaknesses in predicting the outcome of an actual live intelligence issue. This book will be of much interest to students of intelligence studies, public policy, and national security, as well as practitioners. **Researching National Security Intelligence** Stephen Coulthart, Michael Landon-Murray, Damien Van Puyvelde, 2019-11-01 Researchers in the rapidly growing field of intelligence studies face unique and difficult challenges ranging from finding and accessing data on secret activities to sorting through the politics of intelligence successes and failures to making sense of complex socio-organizational or psychological phenomena. The contributing authors to *Researching National Security Intelligence* survey the state of the field and demonstrate how incorporating multiple disciplines helps to generate high quality policy
