**Humans Versus Nature** Daniel R. Headrick, 2020 Since the appearance of Homo sapiens on the planet hundreds of thousands of years ago human beings have sought to exploit their environments extracting as many resources as their technological ingenuity has allowed As technologies have advanced in recent centuries that impulse has remained largely unchecked exponentially accelerating the human impact on the environment Humans versus Nature tells a history of the global environment from the Stone Age to the present emphasizing the adversarial relationship between the human and natural worlds Nature is cast as an active protagonist rather than a mere backdrop or victim of human malfeasance Daniel R Headrick shows how environmental changes epidemics climate shocks and volcanic eruptions have molded human societies and cultures sometimes overwhelming them At the same time he traces the history of anthropogenic changes in the environment species extinctions global warming deforestation and resource depletion back to the age of hunters and gatherers and the first farmers and herders He shows how human interventions such as irrigation systems over fishing and the Industrial Revolution have in turn harmed the very societies that initiated them Throughout Headrick examines how human driven environmental changes are interwoven with larger global systems dramatically reshaping the complex relationship between people and the natural world In doing so he roots the current environmental crisis in the deep past
