D-modules: Local formal convolution of elementary formal meromorphic connections Robert Gelb, 2015 According to the classical theorem of Levelt Turrittin Malgrange and its refined version developed by Claude Sabbah any meromorphic connection over the field of formal Laurent series in one variable can be decomposed in a direct sum of so called elementary formal meromorphic connections Changing the perspective one can also study operations that can be carried out with such special differential modules There are already formulas for the tensor product or the local formal Fourier transform for example This thesis analyses the local formal convolution the multiplicative case as well as the additive case of two elementary formal meromorphic connections and how the convolution can itself be decomposed into a direct sum of elementary formal meromorphic connections again

Twisted L-Functions and Monodromy. (AM-150) Nicholas M. Katz, 2002-02-24 For hundreds of years the study of elliptic curves has played a central role in mathematics The past century in particular has seen huge progress in this study from Mordell's theorem in 1922 to the work of Wiles and Taylor Wiles in 1994 Nonetheless there remain many fundamental questions where we do not even know what sort of answers to expect This book explores two of them What is the average rank of elliptic curves and how does the rank vary in various kinds of families of elliptic curves Nicholas Katz answers these questions for families of big twists of elliptic curves in the function field case with a growing constant field The monodromy theoretic methods he develops turn out to apply still in the function field case equally well to families of big twists of objects of all sorts not just to elliptic curves The leisurely lucid introduction gives the reader a clear picture of what is known and what is unknown at present and situates the problems solved in this book within the broader context of the overall study of elliptic curves The book's technical core makes use of and explains various advanced topics ranging from recent results in finite group theory to the machinery of l -adic cohomology and monodromy Twisted L Functions and Monodromy is essential reading for anyone interested in number theory and algebraic geometry

Mathematical Reviews ,2005 Exponential Sums and Differential Equations Nicholas M. Katz,2016-03-02 This book is concerned with two areas of mathematics at first sight disjoint and with some of the analogies and interactions between them These areas are the theory of linear differential equations in one complex variable with polynomial coefficients and the theory of one parameter families of exponential sums over finite fields After reviewing some results from representation

theory the book discusses results about differential equations and their differential galois groups G and one parameter families of exponential sums and their geometric monodromy groups G The final part of the book is devoted to comparison theorems relating G and G of suitably corresponding situations which provide a systematic explanation of the remarkable coincidences found by hand in the hypergeometric case Annales de l'Institut Fourier Institut Fourier, 1949 Reviews in Number Theory 1973-83 Richard K.
