**Low-Dose Toxicity from Endocrine Active Chemicals** National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Committee on Endocrine-Related Low-Dose Toxicity, 2017-08-14 To safeguard public health the US Environmental Protection Agency EPA must keep abreast of new scientific information and emerging technologies so that it can apply them to regulatory decision making For decades the agency has dealt with questions about what animal testing data to use to make predictions about human health hazards how to perform dose response extrapolations how to identify and protect susceptible subpopulations and how to address uncertainties As alternatives to traditional toxicity testing have emerged the agency has been faced with additional questions about how to incorporate data from such tests into its chemical assessments and whether such tests can replace some traditional testing methods Endocrine active chemicals EACs have raised concerns that traditional toxicity testing protocols might be inadequate to identify all potential hazards to human health because they have the ability to modulate normal hormone function and small alterations in hormone concentrations particularly during sensitive life stages can have lasting and significant effects To address concerns about potential human health effects from EACs at low doses this report develops a strategy to evaluate the evidence for such low dose effects **Exposure Assessment in**

R M Harrison, 2020-10-27 Both genes and environment have profound effects upon our health While some environmental factors such as polluted air are high in the public consciousness there are many other pathways for people's exposure to toxic chemicals such as through food water and contaminated land It is not only chemicals that can affect health environmental radioactivity pathogenic organisms and our changing climate also have implications for public health and all contribute to the global burden of disease leading to both disability and deaths of millions of people annually across the world An understanding of the pathways of environmental exposure and its effects upon health is key to developing regulations and

behaviours that reduce or prevent exposure and the consequent impacts upon health Covering topics from dietary exposure to chemicals through to the health effects of climate change this book brings together contributors from around the world to highlight the latest science on the impacts of environmental pollutant exposure upon public health Present Knowledge in Food Safety Michael E. Knowles, Lucia Anelich, Alan Boobis, Bert Popping, 2022-10-08 Present Knowledge in Food Safety A Risk Based Approach Through the Food Chain presents approaches for exposure led risk assessment and the management of changes in the chemical pathogenic microbiological and physical radioactivity contamination of food at all key stages of production from farm to consumption This single volume resource introduces scientific advances at all stages of the production to improve reliability predictability and relevance of food safety assessments for the protection of public health This book is aimed at a diverse audience including graduate and post graduate students in food science toxicology microbiology medicine public health and related fields The book's reach also includes government agencies industrial scientists and policymakers involved in food risk analysis Includes new technologies such as nanotechnology genetic modification and cloning Provides information on advances in pathogen risk assessment through novel and real time molecular biological techniques biomarkers resistance measurement and cell to cell communication in the gut Covers the role of the microbiome and the use of surrogates especially for viruses **Case Studies in the Application of Probabilistic Safety Assessment Techniques to Radiation Sources** International Atomic Energy Agency, 2006 Probabilistic safety assessment PSA techniques are a key tool used in safety assessments The IAEA has undertaken a Coordinated Research Project on the application of PSA techniques to radiation sources used at medical and industrial facilities This report presents the studies results including the safety insights and recommendations obtained the benefits and limitations of PSA techniques and guidance for performing PSA studies for radiation source applications In addition an overview of the techniques and approaches used in each study and the practice specific results are presented The risk insights obtained constitute potential safety issues to be considered by practitioners facility staff and management equipment designers and regulators in their safety management and risk evaluation activities Further it is intended that international organizations will review the information contained in this report and will take account of it in the development of guidance and requirements related to radiation sources **Workshop on Aggregate Exposure Assessment**, 1998 Human Pesticide Exposure Assessment Michael H. Dong, 1997 *Passive Sampling Techniques in Environmental Monitoring* Richard Greenwood, Graham Mills, Bran Vrana, 2007-07-03 Monitoring pollutants in air soil and water is a routine requirement in the workplace and in the wider environment Passive samplers can provide a representative picture of levels of pollutants over a period of time from days to months by measuring the average concentrations to which they have been exposed Air monitors are widely used for instance to measure the exposure of workers to volatile compounds but also for monitoring the fate of pollutants in the atmosphere Passive sampling devices are now becoming increasingly used to monitor pollutants in

rivers coastal waters and ground water where contamination results from sources such as domestic and industrial discharges and the use of agrochemicals Passive Sampling Techniques in Environmental Monitoring provides a timely collection of information on a set of techniques that help monitor the quality of air surface and ground waters Passive sampling can provide an inexpensive means of obtaining a representative picture of quality over a period of time even where levels of pollutants fluctuate due to discontinuous discharges or seasonal application of chemicals such as pesticides Recent changes in legislation have increased the pressure to obtain better information than that provided by classical infrequent spot sampling Brought together in one source this book looks at the performance of a range of devices for the passive sampling of metals and of non polar and polar organic chemicals in air and in water The strengths and weaknesses and the range of applicability of the technology are considered Report of the OECD Workshop on the Application of Simple Models for Environmental Exposure Assessment ,1993
