conservation organisations to target conservation investment in the region *Infrastructure Development and Ape Conservation* Helga Rainer, Arcus Foundation, 2018-11-08 Presents an objective rigorous analysis of relevant issues along with case studies to examine the interface between ape conservation and infrastructure development This title is also available as Open Access via Cambridge Core **State of the apes** ,2020 The illegal trade in live apes ape meat and body parts occurs across all ape range states and poses a significant and growing threat to the long term survival of wild ape populations worldwide What was once a purely subsistence and cultural activity now encompasses a global multi million dollar trade run by sophisticated trans boundary criminal networks The challenge lies in teasing apart the complex and interrelated factors that drive the ape trade while implementing strategies that do not exacerbate inequality This volume of State of the Apes brings together original research and analysis with topical case studies and emerging best practices to further the ape conservation agenda around killing capture and trade This title is also available as Open Access via Cambridge Core **Best Practice Guidelines for Great Ape Tourism** Elizabeth J. Macfie, Elizabeth A. Williamson, 2010 Executive summary Tourism is often proposed 1 as a strategy to fund conservation efforts to protect great apes and their habitats 2 as a way for local communities to participate in and benefit from conservation activities on behalf of great apes or 3 as a business A few very successful sites point to the considerable potential of conservation based great ape tourism but it will not be possible to replicate this success everywhere The number of significant risks to great apes that can arise from tourism require a cautious approach If great ape tourism is not based on sound conservation principles right from the start the odds are that economic objectives will take precedence the consequences of which in all likelihood would be damaging to the well being and eventual survival of the apes and detrimental to the continued preservation of their habitat All great ape species and subspecies are classified as Endangered or Critically Endangered on the IUCN Red List of Threatened Species IUCN 2010 therefore it is imperative that great ape tourism adhere to the best practice guidelines in this document The guiding principles of best practice in great ape tourism are Tourism is not a panacea for great ape conservation or revenue generation Tourism can enhance long term support for the conservation of great apes and their habitat Conservation comes first it must be the primary goal at any great ape site and tourism can be a tool to help fund it Great ape tourism should only be developed if the anticipated conservation benefits as identified in impact studies significantly outweigh the risks Enhanced conservation investment and action at great ape tourism sites must be sustained in perpetuity Great ape tourism management must be based on sound and objective science Benefits and profit for communities adjacent to great ape habitat should be maximised Profit to private sector partners and others who earn income associated with tourism is also important but should not be the driving force for great ape tourism development or expansion Comprehensive understanding of potential impacts must guide tourism development positive impacts from tourism must be maximised and negative impacts must be avoided or if inevitable better understood and mitigated The ultimate success or failure of great ape tourism can lie

in variables that may not be obvious to policymakers who base their decisions primarily on earning revenue for struggling conservation programmes. However, a number of biological, geographical, economic and global factors can affect a site so as to render ape tourism ill advised or unsustainable. This can be due, for example, to the failure of the tourism market for a particular site to provide revenue sufficient to cover the development and operating costs, or it can result from failure to protect the target great apes from the large number of significant negative aspects inherent in tourism. Either of these failures will have serious consequences for the great ape population. Once apes are habituated to human observers, they are at increased risk from poaching and other forms of conflict with humans. They must be protected in perpetuity, even if tourism fails or ceases for any reason. Great ape tourism should not be developed without conducting critical feasibility analyses to ensure there is sufficient potential for success. Strict attention must be paid to the design of the enterprise, its implementation and continual management capacity in a manner that avoids or at least minimises the negative impacts of tourism on local communities and on the apes themselves. Monitoring programmes to track costs and impacts as well as benefits is essential to inform management on how to optimise tourism for conservation benefits. These guidelines have been developed for both existing and potential great ape tourism sites that wish to improve the degree to which their programme contributes to the conservation rather than the exploitation of great apes.

World Atlas of Great Apes and Their Conservation Julian Oliver Caldecott, Lera Miles, 2005. This comprehensive and authoritative review of the distribution and conservation status of Great Apes includes individual country profiles for each species and overview chapters on ape biology, ecology and conservation challenges.

Infrastructure Development and Ape Conservation, 2018. Infrastructure development in Africa and Asia is expanding at breakneck speed, largely in biodiversity-rich developing nations. The trend reflects governments' efforts to promote economic growth in response to increasing populations, rising consumption rates and persistent inequalities. Large-scale infrastructure development is regularly touted as a way to meet the growing demand for energy, transport and food, and as a key to poverty alleviation. In practice, however, road networks, hydropower dams and development corridors tend to have adverse effects on local populations, natural habitats and biodiversity. Such projects typically weaken the capacity of ecosystems to maintain ecological functions on which wildlife and human communities depend, particularly in the face of climate change. This title is also available as Open Access via Cambridge Core.

Best Practice Guidelines for the Prevention and Mitigation of Conflict Between Humans and Great Apes Kimberley Hockings, 2009. Executive summary. One of the challenges facing great ape conservation is the rising level of interaction between humans and great apes and the resulting conflicts that emerge. As human populations continue to grow and human development makes deeper incursions into forest habitats, such conflicts will become more widespread and prevalent in the natural ranges of great apes, especially considering that the majority of great apes live outside protected areas. It is essential that we develop a comprehensive understanding of existing and potential conflict situations and their current or future

impacts on both great apes and humans This will require the integration of quantitative and qualitative data on multiple aspects of human and great ape behaviour and ecology along with a good understanding of local people s perceptions of the situation Such knowledge can then be used to develop effective locally adapted management strategies to prevent or mitigate human great ape conflicts whilst respecting both conservation objectives and socio cultural economic contexts These guidelines outline a sequence of logical steps that should be considered prior to any form of human great ape conflict intervention and propose possible counter measures to be used in the management of human great ape conflicts Planet Without Apes Craig B. Stanford, 2012-11-05 Can we live with the consequences of wiping our closest relatives off the face of the Earth and all the biological knowledge about ourselves that would die along with them Extinction of the great apes threatens to become a reality within a few human generations Stanford tells us how we can redirect the course of an otherwise bleak future
