**Weather and Climate Change** David Francis, Henk Hengeveld, Canada. Environment Canada, 1998 *Extreme Weather and Climate Change* was prepared in response to questions often posed by policy makers and the general public about whether or not perceived changes in weather behaviour in recent years particularly with respect to extreme weather events and related disasters are real and if so whether such changes are linked to climate change It is being published as the second in a series of special Climate Change Digest reports aimed at explaining and assessing our current understanding or lack thereof of some of the more complex and controversial aspects of climate change science Introductory comments      *Weather and Climate Extremes* Thomas R. Karl, Neville Nicholls, Anver Ghazi, 2013-03-09 Are extreme weather events becoming more common How do extreme weather events impact society These are critical questions that must be examined as we confront the possibility that the world will experience a change in climate over the next century Much of the research in climatology over the past decade has focused on potential changes in long term averages of temperature precipitation and other factors However it is becoming increasingly clear that changes in average values will be accompanied by changes in extreme events Furthermore extreme weather events will impact society to a greater extent as people around the world continue to locate in more hazard prone areas such as coastal zones This book represents a major step forwards in developing a comprehensive set of information about changes in extreme events by providing a review of the problems in data availability quality and analysis that make deriving a clear picture of world wide changes in extreme events so difficult Audience The book is intended for policy makers professionals graduate students and others interested in learning how extreme weather events have changed and how they impact society both now and in the future
