Computing Centre, 1994      **ERDAS Imagine Field Guide**, 1991      **Manual of Geospatial Science and Technology** John D. Bossler, John R. Jensen, Robert B. McMaster, Chris Rizos, 2001-11-22 Professionals in local and national government and in the private sector frequently need to draw on Geographical Information Systems GIS Remote Sensing RS and Global Positioning Systems GPS often in an integrated manner This manual shows a hands on operator how to work across the range of geospatial science and technology whether as a user or as a contractor of services employing these technologies and without either specialist education or substantial experience The manual covers the fundamentals of each of these topical areas providing the requisite mathematics computer science and physics necessary to understand how the technologies work assuming some elementary background in calculus and physics It also shows how the technologies can be used together and focuses on their commonalities A number of applications such as mapping and environmental modeling are presented and a website accompanies the book      A Research Guide to Cartographic Resources Eva H. Dodsworth, 2018-09-22 The interdisciplinary uses of traditional cartographic resources and modern GIS tools allow for the analysis and discovery of information across a wide spectrum of fields A Research Guide to Cartographic Resources navigates the numerous American and Canadian cartographic resources available in print and online offering researchers academics and students with information on how to locate and access the large variety of resources new and old Dozens of different cartographic materials are highlighted and summarized along with lists of map libraries and geospatial centers and related professional associations A Research Guide to Cartographic Resources consists of 18 chapters two appendices and a detailed index that includes place names and libraries structured in a manner consistent with most reference guides including cartographic categories such as atlases dictionaries gazetteers handbooks maps plans GIS data and other related material Almost all of the resources listed in this guide are categorized by geography down to the county level making efficient work of the type of material required to meet the information needs of those interested in researching place specific cartographic related resources Additionally this guide will help those interested in not only developing a comprehensive collection in these subject areas but get an understanding of what materials are being collected and housed in specific map libraries geospatial centers and their related websites Of particular value are the sections that offer directories of cartographic and GIS libraries as well as comprehensive lists of geospatial datasets down to the county level This volume combines the traditional and historical collections of cartography with the modern applications of GIS based maps and geospatial datasets      *Remote Sensing in Archaeology* James R. Wiseman, Farouk El-Baz, 2007-06-04 Over the last few decades a revolution took place in our ability to observe and explore our home planet using spaceborne and airborne remote sensing instruments This revolution resulted from the new capability of observing on a large regional and global scale surface patterns and features and from using

multispectral instruments to observe surface signatures not visible to the human eye and to penetrate below the surface cover using microwave radiation Over the last decade this new technology is being brought to bear in the field of archaeology As nicely and comprehensively described in this book remote sensing techniques are bringing new powerful tools to help archaeologists in their quest of discovery and exploration Even though this field is still in its infancy the different articles in this book give us a glimpse of the things to come and the great potential of remote sensing in archaeology The editors have brought an excellent sampling of authors that illustrate how remote sensing techniques are being used in the real world of archaeological exploration A number of chapters illustrate how spaceborne and airborne remote sensing instruments are being used to decipher surface morphological features in arid Egypt Arabia semi arid Greece Ethiopia Italy as well as tropical regions Costa Rica Guatemala Cambodia to help in archeological and paleontological exploration They illustrate the use of surface cover penetration with radars high resolution multispectral imaging on a regional basis as well as topographic signatures acquired with spaceborne and airborne sensors

Stuart N. Lane, Keith S. Richards, Jim H. Chandler, 1998-05-08 Geomorphologists played a major role in the 1960s and 1970s in terrain research as the potential of the computer was realised for both storing and manipulating landform information With growth in the subject area further technological development and a growing input from other disciplines much of this research has moved into the domain of GIS and Remote Sensing where the involvement of geomorphologists has inevitably been reduced despite the importance of this type of research to geomorphology in general This book comprises selected and full refereed papers from a recent BGRG Annual Conference which was held with these issues in mind The book contains both review and original and significant research papers that consider recent methodological developments in and the constraints of current terrain monitoring and modelling methods in geomorphology along with the application of these methods to specific geomorphological problems By providing up to date research by leaders in the field of terrain study this book will be of enormous value to undergraduates research students and research
