**Brazil** Denise Návia, Mercia Elias Duarte, Carlos H. W. Flechtmann, 2021 Abstract The superfamily Eriophyoidea constitute a group of phytophagous mites of particular economic and evolutionary interest due to their intimate association with host plants and their agricultural importance as harmful or beneficial organisms Studies on the Eriophyoidea fauna in Brazil started in the early 1900s with botanical works on cecidias and were continued with researchers looking for and reporting on eriophyid mites causing damage to agricultural crops Therefore in this annotated checklist we compile information from just over a century on eriophyid mites reported or described from Brazil Its purpose is to facilitate plant protection strategies and guide future work on this important group of phytophagous mites In addition to taxonomy we present information on host plants and general aspects of cecidia attributed to eriophyoid mites but without genus species identification Compilation was based on i literature including papers books theses and congress symposium publications ii specimens deposited in mite collections in Brazil On each species we present i suprageneric generic classification synonyms and previous genus era assignments including references on original and or additional descriptions ii type host plant and other host s plant s found in the country iii host relationships and remarks on symptoms iv localities of occurrences at States Federal District and municipal levels and v host plant status in Brazil as well as biomes where they occur or are cultivated A total of 234 valid eriophyoid mite species are recorded 196 Eriophyidae 20 Diptilomiopidae and 18 Phytoptidae distributed in 92 genera Host plants comprised 233 species belonging to 141 genera and 56 plant families Four new reports of eriophyoid mites in Brazil are presented based on specimens deposited in reference collections A new combination is presented for *Propeaciota secundum* Flechtmann Amrine Stasny in the genus *Khanthongella* In addition data on observations and descriptions of 67 cecidias attributed to eriophyoid mites in five states and on 21 plant families are presented Geographically the distribution of species reports of eriophyoids around Brazil is highly uneven with more than 64% of species 151 spp in the Southeast region which surely reflects a lack of research elsewhere Regarding host plant specificity 77 7% are reported on only one host species 88 9% on one host genus and 98 3% on one host family Regarding host status 64 1% of species are exclusively associated with native host plants 27% with naturalized or exotic cultivated host plants and 6 4% from both native and naturalized or exotic host plants Keywords Eriophyoidea phytophagous mites Neotropical South America host plants Pages 4
