Electronic Nose Introduction sensor And Application Fundamental Of Electronic Olfaction System:

Electronic Nose Himanshu Patel, 2012-06 The sense of smell is one of our fundamental senses. Detection of smell plays a vital role in a wide range of industrial and domestic applications. Olfaction is a challenging new sensing modality for intelligent systems. With the emergence of electronic noses, it is now possible to train a system to detect and recognize a range of different odours. An electronic nose is an intelligent sensing device that uses an array of gas sensors of partial and overlapping selectivity along with a pattern recognition component to distinguish between both simple and complex odours. To date, e noses have had a variety of use in a number of applications from the food industry to medical diagnosis. In this book, I have integrated the electronic nose working principle, sensors used for E nose and overview of applications of E nose. For beginners as well as researchers, this book is a brief guide to E nose.

Electronic Noses Julian W. Gardner, Philip Nigel Bartlett, 1999 This book aims to discuss the basic principles of an electronic nose and to provide an account of recent developments in this field with practical examples of its application. It seeks to review the field together with the many new developments that have occurred since the first meeting was held on electronic noses in Iceland in 1991. It will be essential reading for anyone who is working, researching or simply interested in electronic noses or machine olfaction. A comprehensive appendix is provided at the end of the book.

Handbook of Machine Olfaction Tim C. Pearce, Susan S. Schiffman, H. Troy Nagle, Julian W. Gardner, 2006-01-24 Electronic noses are instruments which mimic the sense of smell. Consisting of olfactory sensors and a suitable signal processing unit, they are able to detect and distinguish odors precisely and at low cost. This makes them very useful for a remarkable variety of applications in the food and pharmaceutical industry, in environmental control or clinical diagnostics and more. The scope covers biological and technical fundamentals and up to date research. Contributions by renowned international scientists as well as application oriented news from successful e nose manufacturers give a well rounded account of the topic and this coverage from R D to applications makes this book a must have read for e nose researchers, designers and users alike.

Sensors and Sensory Systems for an Electronic Nose J. Gardner, Philip N. Bartlett, 1992-04-30 Sensors and Sensory Systems for an Electronic Nose reviews the current state of progress in the development of an electronic instrument capable of olfaction. The instrument, the so called electronic nose, has enormous potential for application in such areas as product flavor control and environmental monitoring. The book discusses the essential elements of an electronic nose such as chemical sensors, signal processing and pattern recognition techniques. It is also one of the first contributions to the new and exciting field of machine olfaction.

The Electronic Nose: Artificial Olfaction Technology Himanshu K. Patel, 2013-09-13 This book provides the basics of odor analysis techniques, sensors used in odor analysis and overview of odor measurement techniques. For beginners as well as researchers, this book is a brief guide for odor measurement and analysis. The book includes a special chapter dedicated to practical implementation of e nose sensor devices with software utility which guides students to prepare projects and work in practical analysis. It also

includes material from early to latest technology research available in the market of e nose era Students and researchers who want to learn the basics of biomedical engineering and sensor measurement technology will find this book useful

Olfaction and Electronic Nose : Proceedings of the 14th International Symposium on Olfaction and Electronic Nose, New York City, NY, USA, 2-5 May 2011 International Symposium on Olfaction and the Electronic Nose, 2011 Capillary-attached Gas Sensor System Design for Electronic Nose Application Behzad Bahraminejad, 2011 Since the 1980s researchers have spent a great deal of effort developing the electronic nose e nose as an artificial olfaction instrument to mimic the mammalian sense of smell Currently the e nose is employed in a wide range of applications such as food and beverage quality control environmental monitoring and medical diagnosis Although published results have indicated great achievement in the field of gas identification systems fabricating a comprehensive instrument for rapid and real time gas identification is still difficult and complicated Most of the efforts to improve electronic nose performance have been in applying diverse gas sensor technologies and signal processing techniques to increase the selectivity of the e nose However the classic structure of the e nose has remained relatively untouched Moreover all the detection parameters are extracted based on the instant trace of the target gas on the sensing element In this dissertation the design and development of a gas identification system based on a developed sensor structure and transient response analysis was studied An air filled capillary was attached to a metal oxide semiconductor gas sensor to fabricate a developed structure and to increase the identifying information of the gas sensor output The new structure involved a unique gas diffusion coefficient for each target gas as an additional parameter in the transient response of the gas sensor in the reaction of a target gas A prototype sensor based on the proposed structure was fabricated and its physical characteristics were investigated The dimensional effects of new physical attachment in both length and diameter were studied and optimized dimensions were selected Application of the fabricated prototype gas sensor in detecting five hydrocarbon gases was studied The results indicated that the sensor successfully distinguished between different applied gases The ability of the optimum sensor structure in real time gas identification was also investigated It proved that the early

portion of the transient response could be applied to achieve a high accuracy classification performance. Then the new sensor structure was applied to the design and development of an e nose. The advantages of the designed e nose were studied by applying diverse simple and complex odors. The results indicated that the new electronic nose could detect different types of odors with a high classification rate. Therefore the development of the identifying abilities of the e nose is another advantage of the new sensor structure. For both the single sensor and e nose system different compatible processing and analyzing methods were employed regarding the sensor transient response characteristics. Different pattern recognition and classification methods were also studied to generate the optimized identification unit. The new structure also reduced the interfering parameters a common problem reported in research and increased the reproducibility of the system. The ability of the developed sensor structure in single and mixed gas identification can be applied to fabricate smarter gas detection instruments and to employ the e nose in gas chromatography or mass spectrometry as challenging applications for future work.
