

The background of the slide is a collage of various anatomical illustrations. At the top, there are smaller drawings of organs and structures. In the center, a large, faint illustration of a human skeleton is visible. At the bottom, there are detailed drawings of the lower limbs, including the femur, tibia, and foot bones.

textbooks and the walls of museums to this day Benjamin Ehrlich's *The Brain in Search of Itself* is the first major biography in English of this singular figure whose scientific odyssey mirrored the rocky journey of his beloved homeland of Spain into the twentieth century. Born into relative poverty in a mountaintop hamlet, Cajal was an enterprising and unruly child whose ambitions were both nurtured and thwarted by his father, a country doctor with a flinty disposition. A portrait of a nation as well as a biography, *The Brain in Search of Itself* follows Cajal from the hinterlands to Barcelona and Madrid where he became an illustrious figure, resisting and ultimately transforming the rigid hierarchies and underdeveloped science that surrounded him. To momentous effect, Cajal devised a theory that was as controversial in his own time as it is universal in ours: that the nervous system is comprised of individual cells with distinctive roles just like any other organ in the body. In one of the greatest scientific rivalries in history, he argued his case against Camillo Golgi and prevailed. In our age of neuroimaging and investigations into the neural basis of the mind, Cajal is the artistic and scientific forefather we must get to know. *The Brain in Search of Itself* is at once the story of how the brain as we know it came into being and a finely wrought portrait of an individual as fantastical and complex as the subject to which he devoted his life.
