TILDA: Towards Industrial LES/DNS in Aeronautics Charles Hirsch, Koen Hillewaert, Ralf Hartmann, Vincent

Couaillier, Jean-Francois Boussuge, Frederic Chalot, Sergey Bosniakov, Werner Haase, 2021-06-28 This book offers detailed insights into new methods for high fidelity CFD and their industrially relevant applications in aeronautics. It reports on the H2020 TILDA project funded by the European Union in 2015-2018. The respective chapters demonstrate the potential of high order methods for enabling more accurate predictions of non linear unsteady flows ensuring enhanced reliability in CFD predictions. The book highlights industrially relevant findings and representative test cases on the development of high order methods for unsteady turbulence simulations on unstructured grids on the development of the LES/DNS methodology by means of multilevel adaptive fractal and similar approaches for applications on unstructured grids and on leveraging existent large scale HPC networks to facilitate the industrial applications of LES/DNS in daily practice. Furthermore, the book discusses multidisciplinary applications of high order methods in the area of aero acoustics. All in all, it offers timely insights into the application and performance of high order methods for CFD and an extensive reference guide for researchers, graduate students and industrial engineers whose work involves CFD and turbulence modeling. Abstracts ,1994 **Energy Deposition for High-Speed Flow Control** Doyle D. Knight, 2019-02-21 Written by a leading expert in the field, this book presents a novel method for controlling high speed flows past aerodynamic shapes using energy deposition via direct current DC laser or microwave discharge and describes selected applications in supersonic and hypersonic flows. Emphasizing a deductive approach, the fundamental physical principles provided give an understanding of the simplified mathematical models derived therefrom. These features, along with an extensive set of 55 simulations, make the book an invaluable reference that will be of interest to researchers and graduate students working in aerospace engineering and in plasma physics. This first volume to be published in the Wiley Series in *Solving Large scale Problems in Mechanics* is devoted to high performance computing using the new generation of computers with parallel and distributed computing capabilities. Parallel and distributed processing is a rapidly growing area of high technology where engineering applications

lagged behind hardware advances New algorithms and codes are required in order to exploit effectively modern computer architectures as programs suitable for conventional computers achieve very modest performances on these new machines There is therefore an urgent need to develop and test powerful solution and data handling techniques capable of exploiting the potential of modern computers and of accomplishing the solution of complex engineering problems in an acceptable computing time This volume intends capturing the latest developments in the field and to serve as an essential reference book on the subject It comprises a comprehensive state of the art treatment of theory and practice illustrated by extensive numerical examples **CANCAM Proceedings** ,1989 **37th AIAA Aerospace Sciences Meeting and Exhibit** ,1999
