Elements Of Chemistry Antoine Lavoisier:

The Development of Chemistry, 1789-1914: Elements of chemistry David M. Knight, 1998 *Elements of Chemistry* Antoine Lavoisier, 2018-01-15 Antoine Laurent de Lavoisier Antoine Lavoisier after the French Revolution August 26 1743 May 8 1794 was a French nobleman and chemist who was central to the 18th century chemical revolution and who had a large influence on both the history of chemistry and the history of biology He is widely considered in popular literature as the father of modern chemistry The 1789 publication of *Elements of Chemistry* *Traité élémentaire de chimie* became the first modern textbook on chemistry and represented Lavoisier's major contribution to the field Within this work Lavoisier introduced a new nomenclature proposed an oxygen theory that dismantled the theory of phlogiston presented a clear statement of the law of conservation of mass clarified the concept of an element as a substance that could not be broken down by any known physical process and described the method whereby compounds are formed from elements

Elements of Chemistry Antoine Laurent Lavoisier, 2017-10-20 Excerpt from *Elements of Chemistry In a New Systematic Order Containing All the Modern Discoveries* Chemifiry While engaged in this employment I perceived Better than I had ever done before the justice of the following maxims of the Abbé de Condillac in his *System of Logic* and from other of his works About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works **Elements of Chemistry, in a New Systematic Order** Antoine Laurent

Lavoisier, 1965-01-01 Monumental classic by the founder of modern chemistry features first explicit statement of law of conservation of matter in chemical change and more Facsimile reprint of original 1790 Kerr translation [The Elements of Chemistry: A Modern Copy Presented In Original Order](#) Antoine Lavoisier, 2025-01-08 The 1789 *Traité élémentaire de Chimie* by the original French author Antoine Lavoisier was officially the world's first book of chemistry including the discovery of elements that would later form the Periodic Table the discovery of oxygen and hydrogen in water the discovery of carbon oxygen and hydrogen in foods as well as the discovery oxygen hydrogen carbon and nitrogen in animals This was the start of chemistry and biochemistry as a science available to us all including the first time a chemical understanding was available for nutrition and biology A year later in 1790 Scottish scientific writer surgeon and translator Dr Robert Kerr wrote the English version *Elements of Chemistry in New Systematic Order Containing all Modern Discoveries Illustrated with Thirteen Copper Plates* This is the version I am updating here Future editions encouraged This historical piece of scientific literature is the foundation for the modern biologist chemist and physicist Antoine Lavoisier is the credited influence across much of 18th

Century Europe decades before this writing across many fields including agriculture manufacturing and civil engineering as well as a great influence to the generations of scientists from the 1760 s until today in biology nutrition biochemistry and physics This presentation to the French Royal Academy of Sciences was a culmination of an estimated 23 years of work on the transformation of substances and heat and this the first time in human history someone had a mental grasp on the chemical nature of our world and the elements necessary for everything in it This originally was a concurrent presentation and publishing by Lavoisier in 1789 unfortunately for the world he was executed by guillotine five years later in 1794 during the French Revolution Lagrange an Italian mathematician physicist astronomer and later naturalized French citizen grieved the beheading by saying It took them only an instant to cut off this head and one hundred years might not suffice to reproduce its like Il ne leur a fallu qu'un moment pour faire tomber cette tête et cent années ne suffiront pas pour en reproduire une semblable When I first started I could not find a free modern copy of this legendary piece of science history so I decided to create an edit myself Near the end of this journey I found another at www.gutenberg.com/ebooks/30775 from Project Gutenberg and this was where I was able to find the illustrations Regardless I intended to read this book thoroughly and this exercise has sparked my reading abilities as well as given myself a proper perspective to the reasoning intelligence and designs of one of the most influential scientists and philosophers of the late 1700 s I added my own touch to this one with original covers as well as updated some language context and arrangement of the text that the Gutenberg version missed or simply directly copy pasted The illustrations were originally the last part of the book behind the Appendix and I added them in the front I put the references to the illustrations in square brackets e.g. Plate IV Fig 2 when there were no brackets before and I did make sure all labels were italicized because they help keep track of parts and so curious readers can track the engineering of Lavoisier's experiments but I did not label which one's were my italics vs Kerr's to reduce distractions The long S in print is completely foreign to modern readers or sometimes it is actually printed as f or f and that was the main obstacle for this copy edit For example if you possess the skills to analyze this short example of real uses in the original translation you can read the long S in practice this shape simply makes the s sound Then you possess the skills to analyze this short example of real uses in the original translation D I kept the long S in the titles to each part as a remembrance also on pg 1 This copy edit makes few language changes from the 1790 s edition Paragraphs are left intact and identically separated for direct references Some changes to make it easier to read all cristal and references are updated to crystal Matres is assumed to be the matraz mixing flask the measurement abbreviated grs was updated to grains about 0.065 grams gaseous is now gaseous and saltpetre is saltpeter Charcoal is reverted back to carbon as it was originally intended by Lavoisier and Kerr see the Advertisement of the Translator for more details Much of the original spelling was kept intact for better or worse to keep close to its original flavor and to save myself from careless mistakes for a translation from two centuries ago I hope you enjoy the world's first chemistry for its history philosophy and scientific perspective Antoine Lavoisier Lisa Yount, 2014-12-15

Antoine Lavoisier is considered to be the father of modern chemistry Using experiments and careful measurements he created a system to help chemists understand how matter behaves He discovered and named oxygen and hydrogen and helped set up a system to classify these and other elements Perhaps his most famous discovery is the role oxygen plays in combustion
