Electronic Noise And Interfering Signals Principles And Applications Signals And Communication Technology:

Electronic Noise and Interfering Signals Gabriel Vasilescu, 2005-01-12 *Electronic Noise and Interfering Signals* is a comprehensive reference book on noise and interference in electronic circuits with particular focus on low noise design. The first part of the book deals with mechanisms modeling and computation of intrinsic noise which is generated in every electronic device. The second part analyzes the coupling mechanisms which can lead to a contamination of circuits by parasitic signals and provides appropriate solutions to this problem. The last part contains more than 100 practical elaborate case studies. The book requires no advanced mathematical training as it introduces the fundamental methods. Moreover, it provides insight into computational noise analysis with SPICE and NOF, a software developed by the author. The book addresses designers of electronic circuits as well as researchers from electrical engineering, physics, and material science. It should be of interest also for undergraduate and graduate students. *Voice and Speech Quality Perception* Ute

Jekosch, 2005-08-02 *Foundations of Voice and Speech Quality Perception* starts out with the fundamental question of how listeners perceive voice and speech quality and how these processes can be modeled. Any quantitative answers require measurements. This is natural for physical quantities but harder to imagine for perceptual measurands. This book approaches the problem by actually identifying major perceptual dimensions of voice and speech quality perception, defining units wherever possible, and offering paradigms to position these dimensions into a structural skeleton of perceptual speech and voice quality. The emphasis is placed on voice and speech quality assessment of systems in artificial scenarios. Many scientific fields are involved. This book bridges the gap between two quite diverse fields, engineering and humanities, and establishes the new research area of Voice and Speech Quality Perception. **Cryptographic Algorithms on Reconfigurable**

Hardware Francisco Rodriguez-Henriquez, N.A. Saqib, Arturo Díaz Pérez, Cetin Kaya Koc, 2007-04-03 Software based cryptography can be used for security applications where data traffic is not too large and low encryption rate is tolerable. But hardware methods are more suitable where speed and real time encryption are needed. Until now there has been no book explaining how cryptographic algorithms can be implemented on reconfigurable hardware devices. This book covers computational methods, computer arithmetic algorithms, and design improvement techniques needed to implement efficient cryptographic algorithms in FPGA reconfigurable hardware platforms. The author emphasizes the practical aspects of reconfigurable hardware design, explaining the basic mathematics involved and giving a comprehensive description of state of the art implementation techniques. Broadband Fixed Wireless Access Marc Engels, Frederik Petre, 2006-12-06 This

introductory volume provides a systematic overview of WiMAX technology, demystifying the technology and providing technical advice on various system trade-offs. Much of the material is based on the practical experiences of the authors in building new systems. Coverage includes the IEEE 802.16 standard, a tutorial on implementation, and tips on controlling cost of WiMAX network ownership. This is a must-read book for professionals involved in broadband fixed wireless access.

Algorithmic Information Theory Peter Seibt, 2007-02-15 Shall we be destined to the days of eternity on holy days as well as working days to be shewing the RELICKS OF LEARNING as monks do the relicks of their saints without working one one single miracle with them Laurence Sterne Tristram Shandy This book deals with information processing so it is far from being a book on information theory which would be built on description and estimation The reader will be shown the horse but not the saddle At any rate at the very beginning there was a series of lectures on Information theory through the looking glass of an algebraist and as years went on a steady process of teaching and learning made the material evolve into the present form There still remains an algebraic main theme algorithms intertwining polynomial algebra and matrix algebra in the shelter of signal theory A solid knowledge of elementary arithmetic and Linear Algebra will be the key to a thorough understanding of all the algorithms working in the various bit stream landscapes we shall encounter This priority of algebra will be the thesis that we shall defend More concretely We shall treat in ve chapters of increasing difficulty ve sensible different subjects in Discrete Mathematics The rst two chapters on data compaction lossless data compression and cryptography are on an undergraduate level the most difficult mathematical prerequisite will be a sound understanding of quotient rings especially of finite fields mostly in characteristic 2

The Variational Bayes Method in Signal Processing Václav Šmídl, Anthony Quinn, 2006-03-30 This is the first book length treatment of the Variational Bayes VB approximation in signal processing It has been written as a self contained self learning guide for academic and industrial research groups in signal processing data analysis machine learning identification and control It reviews the VB distributional approximation showing that tractable algorithms for parametric model identification can be generated in off line and on line contexts Many of the principles are first illustrated via easy to follow scalar decomposition problems In later chapters successful applications are found in factor analysis for medical image sequences mixture model identification and speech reconstruction Results with simulated and real data are presented in detail The unique development of an eight step VB method which can be followed in all cases enables the reader to develop a VB inference algorithm from the ground up for their own particular signal or image model

Multimedia Content Analysis Ajay Divakaran, 2009-03-02 Multimedia Content Analysis Theory and Applications covers the latest in multimedia content analysis and applications based on such analysis As research has progressed it has become clear that this field has to appeal to other disciplines such as psycho physics media production etc This book consists of invited chapters that cover the entire range of the field Some of the topics covered include low level audio visual analysis based retrieval and indexing techniques the TRECVID effort video browsing interfaces content creation and content analysis and multimedia analysis based applications among others The chapters are written by leading researchers in the multimedia field

Grid Enabled Remote Instrumentation Franco Davoli, Norbert Meyer, Roberto Pugliese, Sandro Zappatore, 2008-10-10 Grid architectures which are viewed as tools for the integration of distributed resources play a significant role as managers of computational resources but also as aggregators of measurement instrumentation and pervasive large scale data

acquisition platforms The functionality of a grid architecture allows managing maintaining and exploiting heterogeneous instrumentation and acquisition devices in a unified way by providing standardized interfaces and common work environments to their users This result is achieved through the properties of isolation from the physical network and from the peculiarities of the instrumentation granted by standard middleware together with secure and flexible mechanisms which seek access and aggregate distributed resources This book focuses on a number of aspects related to the effective exploitation of remote instrumentation on the grid These include middleware architecture high speed networking in support of grid applications wireless grid for acquisition devices and sensor networks quality of service provisioning for real time control and measurement instrumentation *Imaging for Forensics and Security* Ahmed Bouridane, 2009-07-14 *Imaging for Forensics and Security* From Theory to Practice provides a detailed analysis of new imaging and pattern recognition techniques for the understanding and deployment of biometrics and forensic techniques as practical solutions to increase security It contains a collection of the recent advances in the technology ranging from theory design and implementation to performance evaluation of biometric and forensic systems This book also contains new methods such as the multiscale approach directional filter bank and wavelet maxima for the development of practical solutions to biometric problems The book introduces a new forensic system based on shoeprint imagery with advanced techniques for use in forensics applications It also presents the concept of protecting the originality of biometric images stored in databases against intentional and unintentional attacks and fraud detection data in order to further increase the security **Adaptive Nonlinear System Identification** Tokunbo Ogunfunmi, 2007-09-12 *Adaptive Nonlinear System Identification* The Volterra and Wiener Model Approaches introduces engineers and researchers to the field of nonlinear adaptive system identification The book includes recent research results in the area of adaptive nonlinear system identification and presents simple concise easy to understand methods for identifying nonlinear systems These methods use adaptive filter algorithms that are well known for linear systems identification They are applicable for nonlinear systems that can be efficiently modeled by polynomials After a brief introduction to nonlinear systems and to adaptive system identification the author presents the discrete Volterra model approach This is followed by an explanation of the Wiener model approach Adaptive algorithms using both models are developed The performance of the two methods are then compared to determine which model performs better for system identification applications *Adaptive Nonlinear System Identification* The Volterra and Wiener Model Approaches is useful to graduates students engineers and researchers in the areas of nonlinear systems control biomedical systems and in adaptive signal processing **The British National Bibliography** Arthur James Wells, 2005 *Electronic Technology*, 1958 *Spread Spectrum Communications* North Atlantic Treaty Organization.
