

The Fundamental Theorem of Calculus

Suppose that the function f is continuous on an interval I containing the point a .

PART I. Let the function F be defined on I by

$$F(x) = \int_a^x f(t) dt.$$

Then F is differentiable on I , and $F'(x) = f(x)$ there. Thus, F is an antiderivative of f on I :

$$\frac{d}{dx} \int_a^x f(t) dt = f(x).$$

PART II. If $G(x)$ is *any* antiderivative of $f(x)$ on I , so that $G'(x) = f(x)$ on I , then for any b in I we have

$$\int_a^b f(x) dx = G(b) - G(a).$$

An Introduction to Discrete Mathematics, Formal System Specification, and Z Darrel Ince, 1992 Formal specification is the name given to the use of discrete mathematics in computer science for describing the function of both hardware and software systems. Poor specification often gives rise to severe problems in software and hardware installation. This textbook is an introduction to both the theory and practice of formal specification, and this new edition includes two new chapters on Z: one giving a number of small examples in Z, the other covering design and Z. Prerequisites in this edition have been kept to a minimum since Professor Ince is at pains to develop the techniques of requirement analysis and discrete mathematics that are needed. Throughout the book are numerous worked examples and exercises which include many real examples of software and computer systems.

It aims to present the state of the art in theory, application tools, and industrialization of FDTs. Among the important features presented are FDT-based system and protocol engineering, FDT application to distributed systems, protocol engineering, practical experience, and case studies.
