Fillomino And Sudoku:

Fillomino and Sudoku Nikoli,2009-06 No one in the puzzle field has hatched as many new brainteasers as Nikoli publishers of Japan's very first puzzle monthly. Now their blockbuster creation sudoku joins forces with a hot newcomer fillomino. Like sudoku, fillomino has a simple set of rules that allow for endlessly fascinating possibilities. The challenge: fill a grid with clusters of numbers. 2s in groups of 2, 3s in groups of 3, etc. so that no group touches a group of the same size. America's millions of Sudoku fans will catch on instantly and they'll be hooked.

Fillomino Puzzle Challenge Hat House,2020-02-16 The solving logic required to solve a fillomino puzzle can be tricky, subtle, difficult to spot and generally quite difficult. A hard fillomino can be a lot tougher to crack than a hard sudoku puzzle. For instance, one of the particularly interesting elements of this logic puzzle is that not every region needs to have one of its members stated in the starting grid. This means that entire regions will be deduced by the solver whilst going along and sometimes these can be really large regions. It is great fun to find these out when solving fillomino puzzles. The most common starting point with solving fillominoes is usually to look for any cells that have their value forced. For instance, if there is a cell of a region trapped between other numbered cells, then the region must come out into one or more of the empty cells. Interesting patterns of the same number can also be useful for making placements. One of the fun elements of fillomino can be working out whether instances of the same number must be members of the same region or in fact must belong to different regions. Marking in the boundaries clearly as you go along is key to solving a good fillomino puzzle.

Sudoku Fillomino - 200 Hard to Master Puzzles 8x8 Dart Veider,2018-09-27 Fillomino also known as Polyominous is a type of logic puzzle. It is played on a rectangular grid of squares. Some cells of the grid start containing numbers referred to as givens. The goal is to divide the grid into blocks. The block must contain the number of cells indicated by the number in the cells of the block. The block cannot touch a similarly sized block horizontally or vertically.
