Applications of Evolutionary Computation Cecilia Di Chio, 2011-04-27 This book constitutes the refereed proceedings of the International Conference on the Applications of Evolutionary Computation EvoApplications 2011 held in Torino Italy in April 2011 colocated with the Evo 2011 events Thanks to the large number of submissions received the proceedings for EvoApplications 2011 are divided across two volumes LNCS 6624 and 6625 The present volume contains contributions for EvoCOMNET EvoFIN EvoIHOT EvoMUSART EvoSTIM and EvoTRANSLOC The 51 revised full papers presented were carefully reviewed and selected from numerous submissions This volume presents an overview about the latest research in EC Areas where evolutionary computation techniques have been applied range from telecommunication networks to complex systems finance and economics games image analysis evolutionary music and art parameter optimization scheduling and logistics These papers may provide guidelines to help new researchers tackling their own problem using EC **Handbook**

of Genetic Programming Applications Amir H. Gandomi, Amir H. Alavi, Conor Ryan, 2015-11-06 This contributed volume written by leading international researchers reviews the latest developments of genetic programming GP and its key applications in solving current real world problems such as energy conversion and management financial analysis engineering modeling and design and software engineering to name a few Inspired by natural evolution the use of GP has expanded significantly in the last decade in almost every area of science and engineering Exploring applications in a variety of fields the information in this volume can help optimize computer programs throughout the sciences Taking a hands on approach this book provides an invaluable reference to practitioners providing the necessary details required for a successful application of GP and its branches to challenging problems ranging from drought prediction to trading volatility It also demonstrates the evolution of GP through major developments in GP studies and applications It is suitable for advanced students who wish to use relevant book chapters as a basis to pursue further research in these areas as well as experienced practitioners looking to apply GP to new areas The book also offers valuable supplementary material for design courses and computation in engineering *Metaheuristics for Big Data* Clarisse Dhaenens, Laetitia Jourdan, 2016-08-16 Big Data is a new

field with many technological challenges to be understood in order to use it to its full potential These challenges arise at all stages of working with Big Data beginning with data generation and acquisition The storage and management phase presents two critical challenges infrastructure for storage and transportation and conceptual models Finally to extract meaning from Big Data requires complex analysis Here the authors propose using metaheuristics as a solution to these challenges they are first able to deal with large size problems and secondly flexible and therefore easily adaptable to different types of data and different contexts The use of metaheuristics to overcome some of these data mining challenges is introduced and justified in the first part of the book alongside a specific protocol for the performance evaluation of algorithms An introduction to metaheuristics follows The second part of the book details a number of data mining tasks including clustering association

rules supervised classification and feature selection before explaining how metaheuristics can be used to deal with them This book is designed to be self contained so that readers can understand all of the concepts discussed within it and to provide an overview of recent applications of metaheuristics to knowledge discovery problems in the context of Big Data **Advances**

Wu,2019-10-25 Animal Agriculture Sustainability Challenges and Innovations discusses the land based production of high quality protein by livestock and poultry and how it plays an important role in improving human nutrition growth and health With exponential growth of the global population and marked rises in meat consumption per capita demands for animal source protein are expected to increase 72% between 2013 and 2050 This raises concerns about the sustainability and

environmental impacts of animal agriculture An attractive solution to meeting increasing needs for animal products and mitigating undesirable effects of agricultural practices is to enhance the efficiency of animal growth reproduction and lactation Currently there is no resource that offers specific knowledge of both animal science and technology including biotechnology for the sustainability of animal agriculture for the expanding global demand of food in the face of diminishing resources This book fills that gap giving readers all the necessary information on important issues facing modern animal agriculture namely its sustainability challenges and innovative solutions Integrates new knowledge in animal breeding biotechnology nutrition reproduction and management Addresses the urgent issue of sustainability in modern animal agriculture Provides practical solutions on how to solve the current and future problems that face animal agriculture worldwide

Encyclopedia of Animal Behavior: G-P Michael D. Breed, Janice Moore, 2010 Entries examine a broad array of different species and behavior patterns using techniques that range from molecular approaches to the study of behavior to analyses of individuals populations species and ecosystems

GECCO-99, 1999 These proceedings contain the papers presented at the GECCO conference held in Orlando Florida July 13 17 1999 The 1999 Genetic and Evolutionary Computational Conference GECCO 99 combined the longest running conferences in evolutionary computation ICGA and the world's two largest EC conferences GP and ICGA to create a unique opportunity to collect the best in research in this growing field of computer science and engineering

Evolutionary Optimization: the μ GP toolkit Ernesto Sanchez, Massimiliano Schillaci, Giovanni Squillero, 2011-04-01 This book describes an award winning evolutionary algorithm that outperformed experts and conventional heuristics in solving several industrial problems It presents a discussion of the theoretical and practical aspects that enabled GP MicroGP to autonomously find the optimal solution of hard problems handling highly structured data such as full fledged assembly programs with functions and interrupt handlers For a practitioner GP is simply a versatile optimizer to tackle most problems with limited setup effort The book is valuable for all who require heuristic problem solving methodologies such as engineers dealing with verification and test of electronic circuits or researchers working in robotics and mobile communication Examples are provided to guide the reader through the process from problem definition to gathering results For an evolutionary computation researcher GP may be regarded as a platform where new operators and strategies can be easily tested MicroGP the toolkit is an active project hosted by Sourceforge <http://ugp3.sourceforge.net>
