Parameter Setting in Evolutionary Algorithms F.J. Lobo, Cláudio F. Lima, Zbigniew Michalewicz, 2007-04-03 One of the main difficulties of applying an evolutionary algorithm or as a matter of fact any heuristic method to a given problem is to decide on an appropriate set of parameter values Typically these are specified before the algorithm is run and include population size selection rate operator probabilities not to mention the representation and the operators themselves This book gives the reader a solid perspective on the different approaches that have been proposed to automate control of these parameters as well as understanding their interactions The book covers a broad area of evolutionary computation including genetic algorithms evolution strategies genetic programming estimation of distribution algorithms and also discusses the issues of specific parameters used in parallel implementations multi objective evolutionary algorithms and practical consideration for real world applications It is a recommended read for researchers and practitioners of evolutionary computation and heuristic methods

Evolutionary Algorithms William M. Spears, 2013-03-09 Despite decades of work in evolutionary algorithms there remains a lot of uncertainty as to when it is beneficial or detrimental to use recombination or mutation This book provides a characterization

of the roles that recombination and mutation play in evolutionary algorithms. It integrates prior theoretical work and introduces new theoretical techniques for studying evolutionary algorithms. An aggregation algorithm for Markov chains is introduced which is useful for studying not only evolutionary algorithms specifically but also complex systems in general. Practical consequences of the theory are explored and a novel method for comparing search and optimization algorithms is introduced. A focus on discrete rather than real valued representations allows the book to bridge multiple communities including evolutionary biologists and population geneticists.

Evolutionary Optimization in Dynamic Environments Jürgen Branke, 2012-12-06 Evolutionary Algorithms (EAs) have grown into a mature field of research in optimization and have proven to be effective and robust problem solvers for a broad range of static real world optimization problems. Yet since they are based on the principles of natural evolution and since natural evolution is a dynamic process in a changing environment, EAs are also well suited to dynamic optimization problems. *Evolutionary Optimization in Dynamic Environments* is the first comprehensive work on the application of EAs to dynamic optimization problems. It provides an extensive survey on research in the area and shows how EAs can be successfully used to continuously and efficiently adapt a solution to a changing environment, find a good trade off between solution quality and adaptation cost, find robust solutions whose quality is insensitive to changes in the environment, find flexible solutions which are not only good but that can be easily adapted when necessary. All four aspects are treated in this book, providing a holistic view on the challenges and opportunities when applying EAs to dynamic optimization problems. The comprehensive and up to date coverage of the subject together with details of latest original research makes *Evolutionary Optimization in Dynamic Environments* an invaluable resource for researchers and professionals who are dealing with dynamic and stochastic optimization problems and who are interested in applying local search heuristics such as evolutionary algorithms.

Nature-Inspired Algorithms for Optimisation Raymond Chiong, 2009-05-02 Nature Inspired Algorithms have been gaining much popularity in recent years due to the fact that many real world optimisation problems have become increasingly large, complex and dynamic. The size and complexity of the problems nowadays require the development of methods and solutions whose efficiency is measured by their ability to find acceptable results within a reasonable amount of time rather than an ability to guarantee the optimal solution. This volume *Nature Inspired Algorithms for Optimisation* is a collection of the latest state of the art algorithms and important studies for tackling various kinds of optimisation problems. It comprises 18 chapters including two introductory chapters which address the fundamental issues that have made optimisation problems difficult to solve and explain the rationale for seeking inspiration from nature. The contributions stand out through their novelty and clarity of the algorithmic descriptions and analyses and lead the way to interesting and varied new applications.

Evolutionary Optimization Ruhul Sarker, Masoud Mohammadian, Xin Yao, 2002-01-31 The use of evolutionary computation techniques has grown considerably over the past several years. Over this time the use and applications of these techniques have been further enhanced, resulting in a set of
