

Evolution and Selection

What mechanisms lead to changes in the diversity of species on Earth?

Why?

People make choices by selecting options they like best. The natural world also 'selects' (although not as a conscious decision) when environmental conditions allow organisms with a particular genetic trait to live healthier lives than other organisms. In this activity, we will explore how selection affects populations over time.

Model 1 – Desktop Swab Results

1. What is the source of the bacteria in the culture tube in Model 1?

The bacteria in model 1 comes from the top of a desktop so it most likely came from human sources that have contact with the desk top.

2. How many genetic variants of *E. coli* were present in the culture from the initial swab?

There were four genetic variants of *E. coli* present in the initial swab.

3. What variants of *E. coli* are found on the dish grown without triclosan?

All four variants of *E. coli* are found on the dish grown without the triclosan.

4. Refer to the dish in Model 1 with the medium that included triclosan.

- a. What variants of *E. coli* are found on the dish grown with triclosan?

The only variant of *E. coli* found on the dish grown with triclosan is Variant S.

- b. What likely happened to the other variants of *E. coli* on the dish with the medium containing triclosan?

The other bacteria was likely killed by the triclosan.

Evolution by natural selection is the dominant and unifying theme in biology yet many college students hold alternative conceptions about the topic even after completing general biology To develop effective instructional strategies and track conceptual understanding it is useful to have a detailed assessment tool easily used with large classes This study presents the Conceptual Inventory of Natural Selection CINS a distractor driven twenty item multiple choice test that assesses understanding of ten concepts related to natural selection biotic potential stable populations limited natural resources limited survival variation within a population variation inherited differential survival change in populations origin of variation and origin of species Development refinement and field testing of individual CINS items are presented and validity readability reliability and factor analysis of the CINS are described There was significant correlation between student performance on the posttest CINS and end of semester interviews suggesting that the CINS is a useful classroom tool The CINS was used as both a pretest and posttest to determine relative difficulty of the concepts among college students The three most challenging concepts were random origin of variation how populations change over time due to changing proportions of alleles and how new species originate Many students chose distractors including need as a driving force Results support the use of non traditional methods as only students in such classes demonstrated any improvement on the CINS posttest Pre and posttesting with the CINS was also used to assess relative effectiveness of using two types of supplemental reading materials selections from narrative non textbook sources or from other general biology textbooks in a general biology course These results suggest that specific content of readings was more important than style of the readings Implications for teaching both students and pre service teachers are described
