Fabricating Architecture Selected Readings In Digital Design And Manufacturing:

Fabricating Architecture Robert Corser, 2012-03-20 In this increasingly digitized world any investigation of architecture inevitably leads to considerations of fabrication But despite its omnipresence in contemporary practice and theory digital design remains a fluid concept its development and current influence discussed in scattered articles *Digital Processes* Moritz Hauschild, Rüdiger Karzel, 2012-12-10 these days a computer is as much a part of every household's standard equipment as a refrigerator and yet the explosion of computer technology in the last several decades has transformed the daily life of every member of society far more than even utopians would ever have allowed themselves to dream No wonder then that from design to production architecture too is becoming more and more subject to digital influences The range of those influences stretches from the classical computer programs used in design and presentation to media supported design processes all the way to computerized production techniques to say nothing of industrialized bricklayer robots From measurement to planning and production architecture is the product of a closely coordinated digital process chain What influence do digital design digital design and production methods have on contemporary architecture How are these methods changing architecture and the way it is created Where does the potential of digital media for architecture lie What are the areas in which every individual firm can begin to use them What are the advantages of working electronically How and at what cost can these methods be integrated into the day to day work of the professional architect This publication offers answers to these and many other questions on all aspects of the digital design and construction process **Customization**

Fabricating Plasticity in Aluminum Heather Roberge, 2025-03-05 This book argues for the value of the material prototype as a critical site of design innovation through a series of design and architectural case studies Illustrated by physical objects such as chairs columns and building facades these full scale material investigations reflect their designers deep knowledge of material manufacturing and geometry The projects do not simply express how they are made rather their designers leverage the capacities of metal forming to exert distinctive influence on the objects expression and performance embracing manufacturing processes as instruments of material innovation Organized in two parts part one presents the material framework informing work by Arad Newson Heatherwick Future Systems Foster OMA Rex Hadid and others Seven metal forming techniques including Press Forming Press Brake Forming Spinning Panel Beating Casting Extruding and Superplastic Forming are presented alongside work implemented with these processes Part two presents original design research Thermoformed aluminum facade systems ask critical questions of The Part Tessellation The Mold Tooling The Seam and the Finish Post Processing illustrating the potential of design inquiry when techniques of material production alter techniques of design Aluminum is redefined inheriting a plasticity which alters the intrinsic qualities of its raw production For students and professionals in the fields of industrial design and architecture this book presents an optimistic role for material in the design process

Digital Wood Design Fabio Bianconi, Marco Filippucci, 2019-02-24 This book explores various digital representation strategies that could change the future of wooden architectures by blending tradition and innovation Composed of 61 chapters written by 153 authors hailing from 5 continents 24 countries and 69 research centers it addresses advanced digital modeling with a particular focus on solutions involving generative models and dynamic value inherent to the relation between knowing how to draw and how to build Thanks to the potential of computing areas like parametric design and digital manufacturing are opening exciting new avenues for the future of construction The books chapters are divided into five sections that connect digital wood design to integrated approaches and generative design to model synthesis and morphological comprehension to lessons learned from nature and material explorations to constructive wisdom and implementation related challenges and to parametric transfigurations and morphological optimizations
