Handbook of Research on Big Data Storage and Visualization Techniques Segall, Richard S.,Cook, Jeffrey S.,2018-01-05 The digital age has presented an exponential growth in the amount of data available to individuals looking to draw conclusions based on given or collected information across industries Challenges associated with the analysis security sharing storage and visualization of large and complex data sets continue to plague data scientists and analysts alike as traditional data processing applications struggle to adequately manage big data The Handbook of Research on Big Data Storage and Visualization Techniques is a critical scholarly resource that explores big data analytics and technologies and their role in developing a broad understanding of issues pertaining to the use of big data in multidisciplinary fields Featuring coverage on a broad range of topics such as architecture patterns programing systems and computational energy this publication is geared towards professionals researchers and students seeking current research and application topics on the subject   Reasoning Web. Learning, Uncertainty, Streaming, and Scalability Claudia d'Amato,Martin Theobald,2018-09-14 This volume contains lecture notes of the 14th Reasoning Web Summer School RW 2018 held in Esch sur Alzette Luxembourg in September 2018 The research areas of Semantic Web Linked Data and Knowledge Graphs have recently received a lot of attention in academia and industry Since its inception in 2001 the Semantic Web has aimed at enriching the existing Web with meta data and processing methods so as to provide Web based systems with intelligent capabilities such as context awareness and decision support The Semantic Web vision has been driving many community efforts which have invested a lot of resources in developing vocabularies and ontologies for annotating their resources semantically Besides ontologies rules have long been a central part of the Semantic Web framework and are available as one of its fundamental representation tools with logic serving as a unifying foundation Linked Data is a related research area which studies how one can makeRDF data available on the Web and interconnect it with other data with the aim of increasing its value for everybody Knowledge Graphs have been shown useful not only for Web search as demonstrated by Google Bing etc but also in many application domains   *Study on Data Placement Strategies in Distributed RDF Stores* Daniel Dominik Janke,2020-03-15 The distributed setting of RDF stores in the cloud poses many challenges including how to optimize data placement on the compute nodes to improve query performance In this book a novel benchmarking methodology is developed for data placement strategies one that overcomes these limitations by using a data placement strategy independent distributed RDF store to analyze the effect of the data placement strategies on query performance Frequently used data placement strategies have been evaluated and this evaluation challenges the commonly held belief that data placement strategies which emphasize local computation lead to faster query executions Indeed results indicate that queries with a high workload can be executed faster on hash based data placement strategies than on for example minimal edge cut covers The analysis of additional measurements indicates that vertical parallelization i e a well distributed workload may be more important than horizontal containment i e minimal data transport for efficient query processing Two such data placement

strategies are proposed the first found in the literature is entitled overpartitioned minimal edge cut cover and the second is the newly developed molecule hash cover Evaluation revealed a balanced query workload and a high horizontal containment which lead to a high vertical parallelization As a result these strategies demonstrated better query performance than other frequently used data placement strategies The book also tests the hypothesis that collocating small connected triple sets on the same compute node while balancing the amount of triples stored on the different compute nodes leads to a high vertical parallelization **Getting Started with Big Data Query using Apache Impala** Agus Kurniawan,2021-02-06 This book is designed for anyone who learns how to get started with Apache Impala The book covers SQL queries and data manipulation for Apache Impala The following is a list of highlight topics Introduction to Apache Impala Working with Apache Impala Shell SQL Querying with Apache Hue and Apache Impala Loading Dataset to Apache Impala Basic SQL Query for Apache Impala Joining Query and Subquery on Apache Impala Partition Data on Apache Impala Apache Impala Database Programming with Java *Cloudera Impala* John Russell,2013-11-25 Learn about Cloudera Impala an open source project that s opening up the Apache Hadoop software stack to a wide audience of database analysts users and developers The Impala massively parallel processing MPP engine makes SQL queries of Hadoop data simple enough to be accessible to analysts familiar with SQL and to users of business intelligence tools and it s fast enough to be used for interactive exploration and experimentation Using Cloudera Impala Chauhan Avkash,2013-12 This book is an easy to follow step by step tutorial where each chapter takes your knowledge to the next level The book covers practical knowledge with tips to implement this knowledge in real world scenarios A chapter with a real life example is included to help you understand the concepts in full Using Cloudera Impala is for those who really want to take advantage of their Hadoop cluster by processing extremely large amounts of raw data in Hadoop at real time speed Prior knowledge of Hadoop and some exposure to HIVE and MapReduce is expected Hadoop in 24 Hours, Sams Teach Yourself Jeffrey Aven,2017-04-07 Apache Hadoop is the technology at the heart of the Big Data revolution and Hadoop skills are in enormous demand Now in just 24 lessons of one hour or less you can learn all the skills and techniques you ll need to deploy each key component of a Hadoop platform in your local environment or in the cloud building a fully functional Hadoop cluster and using it with real programs and datasets Each short easy lesson builds on all that s come before helping you master all of Hadoop s essentials and extend it to meet your unique challenges Apache Hadoop in 24 Hours Sams Teach Yourself covers all this and much more Understanding Hadoop and the Hadoop Distributed File System HDFS Importing data into Hadoop and process it there Mastering basic MapReduce Java programming and using advanced MapReduce API concepts Making the most of Apache Pig and Apache Hive Implementing and administering YARN Taking advantage of the full Hadoop ecosystem Managing Hadoop clusters with Apache Ambari Working with the Hadoop User Environment HUE Scaling securing and troubleshooting Hadoop environments Integrating Hadoop into the enterprise Deploying Hadoop in the cloud Getting started with Apache Spark Step by step instructions walk you through common

Impala since the existing Join implementation is blocking based This work implements a non blocking Join where the reading of right side table of Join and building of its Hashtable is overlapped with construction of left side table data Experimental results show that non blocking Join implementation improves the execution of Join queries by 9 12% Next scalability study of Impala is performed to evaluate how well Impala scales out on increasing the number of compute nodes for divergent SQL queries We observe that the default Inner Join SQL query is not scaling well since Impala by default does a broadcast Join We change the default Inner Join in Impala to do partitioned shuffle Join and the results show that it scales linearly We then evaluate Hive SQL queries running on top of Triple H RDMA Remote Direct Memory Access based HDFS which is optimized for HDFS Write We design new write intensive SQL benchmark queries and the experimental results show that Triple H brings benefit of 45% to write intensive queries and 25% benefit to read intensive query in Hive In another scheme we evaluate querying of HBase tables in Hive running on top of Triple H and we see 20 33% benefit for write intensive queries and 15% benefit for read intensive query From these results we show improvements of SQL queries on Hadoop Systems
