Oxidation in Foods and Beverages and Antioxidant Applications Eric A Decker, Ryan J Elias, D. Julian McClements, 2010-09-27 Oxidative rancidity is a major cause of food quality deterioration leading to the formation of

undesirable off flavours as well as unhealthful compounds. Antioxidants are widely employed to inhibit oxidation and with current consumer concerns about synthetic additives and natural antioxidants are of much interest. The two volumes of *Oxidation in foods and beverages and antioxidant applications* review food quality deterioration due to oxidation and methods for its control. The first volume focuses on oxidation mechanisms and antioxidant activity. Initial chapters in part one describe oxidation processes in foods including the role of metals, heme proteins and lipoxygenase. The impact of oxidation on food flavour and the health aspects of oxidized fats are also covered. Final chapters in part one review the measurement of the extent of lipid oxidation and methods for food shelf life determination. Part two discusses the ways in which antioxidants inhibit food oxidation, factors affecting antioxidant efficacy, methods to measure antioxidant activity and novel antioxidants. With its distinguished international team of editors and contributors, the two volumes of *Oxidation in foods and beverages and antioxidant applications* is a standard reference for R D and QA professionals in the food industry as well as academic researchers interested in food quality. Determining Mycotoxins and Mycotoxigenic Fungi in Food and Feed Sarah De Saeger, 2011-02-07. Mycotoxins, toxic secondary metabolites produced by mycotoxigenic fungi, pose a significant risk to the food chain. Indeed, they may be the most hazardous of all food contaminants in terms of chronic toxicity and legislative limits on their levels in food and feed continue to be developed worldwide. Rapid and reliable methods for the determination of both mycotoxigenic fungi and mycotoxins in food and feed are therefore essential. This book reviews current and emerging methods in this area. Part one focuses on the essentials of mycotoxin determination, covering sampling, sample preparation and clean up and key determination techniques such as chromatographic separation, liquid chromatography, mass spectrometry and immunochemical methods. Part two then goes on to describe quality assurance, official methods and performance criteria for determining mycotoxins in food and feed. Topics covered include laboratory accreditation, method validation and measurement uncertainty. The development and analysis of biomarkers for mycotoxins are discussed in part three. Individual chapters focus on detecting exposure in humans and animals. Part four is concerned with the processes involved in determining mycotoxigenic fungi in food and feed. It also describes the identification of genes and gene clusters involved in mycotoxin synthesis as well as DNA barcoding of toxigenic fungi. Finally, part five explores some of the emerging methods for mycotoxin analysis, ranging from bio-sensing to spectroscopic techniques. With its distinguished editor and international team of contributors, *Determining mycotoxins and mycotoxigenic fungi in food and feed* is a standard reference for all those concerned with reducing mycotoxin contamination in the food chain. Focuses on the essentials of mycotoxin determination, covering sampling, sample preparation, clean up and key determination techniques.
