

# Electrical Safety

## ELECTRICITY CAN KILL

- Each year about 1000 accidents at work involving electrical shocks or burns are reported to Health & Safety Executive.
- Around 50 of these are fatal.
- Shocks from voltages over 50 volts AC or 120 volts DC are hazardous.
- Even non-fatal shocks can cause severe and permanent injury.

## WHAT DO THE REGULATIONS REQUIRE?

### The Health and safety at Work Act 1974 states that:

- Employers are responsible for ensuring the safety and health of their employees and the public, if they are at risk from work activities.

### The Electricity at Work Regulations 1989 states that:

- Electrical systems must be constructed in a way that prevents danger.
- Employers, employees and the self-employed must maintain the electrical systems so as to prevent danger.
- Employers, employees and the self-employed must work on, or use, electrical systems carried out in a way that prevents danger.
- Electrical equipment used in hazardous environments must be constructed or protected to prevent it becoming dangerous.
- Only those with competent knowledge or experience or under adequate supervision should work on, or use, electrical equipment that could cause danger or injury.

### The Reporting of Injuries, Diseases and Dangerous Occurrences Regulations 1995 states that:

- The enforcing authority must be notified immediately by telephone using the Incident Reporting Line 0845 300 9921 or via the Health and Safety Executive's Incident Report page.

## ASSESSING THE RISKS

Health and safety risk assessment should take into account the risks associated with electricity.

### Risk assessment consists of 3 steps:

1. Identifying the hazards.
2. Deciding who might be harmed and how.
3. Evaluating the risks and deciding on precautions.
4. Recording your findings and implementing them.
5. Reviewing your risk assessment and updating it if necessary.

### What conditions create risks from:

- Contact with live parts.
- Electrical faults and the risks are greatest where the equipment contains a live source.
- Potentially or explosive atmospheres.
- Rough conditions where portable equipment can easily become hot and can make its surroundings live and dangerous.
- Confined spaces where it will be very difficult to avoid a shock.
- State of the equipment such as extension leads and flexible leads which are particularly liable to damage.

For further guidance please see HSE's website [www.hse.gov.uk/elect](http://www.hse.gov.uk/elect)

## REDUCING THE RISKS FOR EMPLOYERS

Ensure people working on or with electrical equipment or systems are 'competent' for the task.

### Ensure the electrical installation:

- Complies to BS 7671 Requirements for electrical installations.
- Is maintained in a safe condition.
- There are enough socket outlets are provided.

### Provide safe and suitable equipment:

- Equipment must be suitable for its working environment.
- Consider using air, hydraulic or thermopneumatic tools in harsh conditions.
- Provide a switch near each fixed machine to cut off power in an emergency.
- Replace damaged sections of cable completely.
- Special electrical equipment should be used in potentially flammable or explosive atmospheres.
- Consider working for specialist advice.

### Reduce the voltage:

- Temporary lighting can be set at lower voltages.
- Battery operated tools are safer.
- Portable tools designed to be run from a 110 volt source topped to earth supply are available.

Provide a safety device (an RCD) if equipment operating at 230 volts or higher is used. An RCD is a device which detects some faults in the electrical system and rapidly switches off the supply.

## REDUCING THE RISKS FOR EMPLOYEES

Visual inspection should also be done by employees.

### Work safety:

- Equipment or faulty equipment must be taken out of use, labelled 'DO NOT USE' and kept secure until examined by a competent person.
- If possible, tools and power socket outlets should be switched off before plugging in or unplugging.
- Equipment should be switched off under unplugging before cleaning or making adjustments.

Always report cables will be present and live when digging in the street, pavement or near buildings.

Never unplug a cable (live switched off if possible) or remove cable working directly from the live.

The live or fault operating company must be consulted before starting work near electrical equipment or terminals.
