Exposure Control Plan Device Evaluation Workbook Introduction:

The Compendium of Infection Control Technologies Workbook Introduction Joel Rossen, Joel Stephen Rossen
DVM, 2013-04-15 The Compendium of Infection Control Technologies Workbook Introduction This is the book that not only assists you in the creation of your Exposure Control Plan but is also the only publication that actually becomes part of that plan. Designed to save you hundreds of hours and many thousands of dollars, the Compendium Workbook pairs hundreds of devices with device evaluation forms, dramatically streamlining the task of considering and evaluating workplace engineering controls. Combined with a free membership to our unique website www.MedicalSafetyBook.com which gives you hundreds of one-click links for ordering device samples and evaluation materials, the Compendium is not just a book; it is a comprehensive, safer device evaluation system.

Preventing transmission of infection in the workplace has become one of the most important considerations of the current work environment. According to the CDC, exposures to blood and other bodily fluids occur across a wide variety of occupations. Health care workers, emergency response, public safety personnel, and other workers can be exposed to blood and other potentially infectious materials (OPIM) through needlestick and other sharps injuries, mucous membrane and skin exposures. The pathogens of primary concern are the human immunodeficiency virus (HIV), hepatitis B virus (HBV), and hepatitis C virus (HCV). Workers and employers are urged to take advantage of available engineering controls and work practices to prevent exposure to blood and other body fluids.

On Nov 6, 2000, President Bill Clinton signed into law the bloodborne pathogens standard (BBP) by way of the Needlestick Safety and Prevention Act. The law was necessitated by both the lack of adequate engineering controls and the failure of the healthcare industry to take advantage of those controls that did exist. Workers and employers are not actually urged to comply; they are truly and legally required to comply, yet many still don't. It is just too difficult and time-consuming and expensive. But failure to comply can be extraordinarily expensive. In 2000, when the bill was signed, the Bloodborne Pathogen Standard initially compiled in 1991 was brought into the 21st century, strengthened, and given teeth. OSHA, which provided the BBP, is also responsible for its enforcement. All facilities with even a single at-risk employee are required to adhere to the standard, which includes creation and annual revision of an exposure control plan, a comprehensive, customized plan for each of those facilities, which includes evaluation or consideration of every available engineering control designed to prevent such an exposure. Failure to comply can be catastrophic, not only to an injured employee but to the facility itself. In 2010, OSHA levied fines exceeding 100,000 on 164 facilities that were out of compliance. The number one defect cited by OSHA in these cases was failure to have a complete and up-to-date exposure control plan.

This publication makes adherence to one of the most grotesquely difficult parts of the standard relatively easy. Recent talk in the industry has rumored that as tools like this one, facilitating compliance, become universally available, OSHA will become even less tolerant of those who fail to comply. Add this Compendium edition to your library and to your exposure control now. Bring your exposure control plan up to date. The Compendium of Infection

Bellavia,1992 *Compendium of Infection Control Technologies* Joel Rossen,Joel S Rossen, Dr,Ron Stoker,2013-04-19 The Compendium of Infection Control Technologies Part 1 Every employer where even a single employee is at risk of exposure to blood borne pathogens such as HIV HVA HVB or HVC must have a written Exposure Control Plan in place This plan must include evaluation or consideration of every engineering control medical device or personal protective device that is currently on the market for prevention of such an adverse event Finding and procuring those devices is just the beginning of this gargantuan task This publication is the central cog in the MedicalSafetyBook.com exposure prevention device evaluation system The device evaluation task is enormous as of this writing there are currently well over 700 such devices on the market And that is just one of the reasons that so many

facilities are severely out of compliance The task is just too big At least it was A task like this was made for computer automation And that is exactly what has been done here Simply ascertaining where and what these devices are is a task that could take weeks or months Then obtaining samples and ascertaining methods of evaluation months more This would be a full time job for one or more employees As the central part of the MedicalSafetyBook com system this publication does most of that work for you The first four books of the Compendium Workbook series introduce you to nearly 300 devices divided into 64 different categories of safety devices plus two categories of educational references Now it is so much easier because MedicalSafetyBook com does all the work to get you the samples You don t need to call your buying group or suppliers Just click on the devices you want to evaluate and their providers will get back to you often the same day To facilitate preparation of your ECP each device is paired with an evaluation form simplifying the task of device evaluation Devices for prevention of needlestick and sharps injuries for example can be easily evaluated by following straightforward forms and making annotations directly in your workbook Upon completion the workbook is then added to your exposure control plan ECP and pulled off the shelf and presented to OSHA to demonstrate compliance in the event of an audit Of course the device evaluation workbook is used to choose the specific devices that would be most beneficial to your practice or business But then you actually have to get some of those devices to evaluate them We have taken care of that for you Over 120 medical safety manufacturers are currently cooperating with MedicalSafetyBook com to simplify the process of obtaining additional literature and samples of the devices for evaluation Once you decide which devices you want to evaluate simply go to MedicalSafetyBook com a free membership to which is included with your purchase and click on the link Join MedicalSafetyBook com for free Once you join you will be able to order samples of devices with one click each After a single click participating manufacturers will send literature samples and even representatives directly to your practice Even non participating manufacturers will be notified of your interest and will be given the opportunity to contact you directly to provide you with the tools for evaluating their devices This system makes adherence to one of the most grotesquely difficult parts of the standard relatively easy or at least possible Recent talk in the industry has rumored that as tools like this one which facilitate compliance become universally available OSHA will become even less tolerant of those who fail to comply It is time to get ahead of the curve Why wait Add this Compendium edition to your library and to your exposure control plan now Use this workbook to bring your exposure control plan up to date Do it today
