Exploring The Limits Of Bootstrap Wiley Series In Probability And Statistics:

Exploring the Limits of Bootstrap Raoul LePage, Lynne Billard, 1992-04-16 Explores the application of bootstrap to problems that place unusual demands on the method The bootstrap method introduced by Bradley Efron in 1973 is a nonparametric technique for inferring the distribution of a statistic derived from a sample Most of the papers were presented at a special meeting sponsored by the Institute of Mathematical Statistics and the Interface Foundation in May 1990

Essays in Honor of Joon Y. Park Yoosoon Chang, Sokbae Lee, J. Isaac Miller, 2023-04-24 Volumes 45a and 45b of Advances in Econometrics honor Professor Joon Y Park who has made numerous and substantive contributions to the field of econometrics over a career spanning four decades since the 1980s and counting General Technical Report RMRS, 1998

Statistical Strategy for Inventorying and Monitoring the Ecosystem Resources of the Mexican States of Jalisco and Colima at Multiple Scales and Resolution Levels Hans T. Schreuder, 2003 The sampling strategy is presented for the initial phase of the natural resources pilot project in the Mexican States of Jalisco and Colima The sampling design used is ground based cluster sampling with poststratification based on Landsat Thematic Mapper imagery The data collected will serve as a basis for additional data collection mapping and spatial modeling products to be described in detail in later documents Estimation described in this document will be primarily useful for strategic planning at the state and national levels Because it is a pilot study the approach for the actual statewide and national inventories is likely to be modified as results are obtained and studied

Climate Time Series Analysis Manfred Mudelsee, 2010-08-26 Climate is a paradigm of a complex system Analysing climate data is an exciting challenge which is increased by non normal distributional shape serial dependence uneven spacing and timescale uncertainties This book presents bootstrap resampling as a computing intensive method able to meet the challenge It shows the bootstrap to perform reliably in the most important statistical estimation techniques regression spectral analysis extreme values and correlation This book is written for climatologists and applied statisticians It explains step by step the bootstrap algorithms including novel adaptations and methods for confidence interval construction It tests the accuracy of the algorithms by means of Monte Carlo experiments It analyses a large array of climate time series giving a detailed account on the data and the associated climatological questions This makes the book self contained for graduate students and researchers

Cyclostationarity: Theory and Methods - IV Fakher Chaari, Jacek Leskow, Radosław Zimroz, Agnieszka Wyłomańska, Anna Dudek, 2019-07-31 This book gathers contributions presented at the 10th Workshop on Cyclostationary Systems and Their Applications held in Gr dek nad Dunajcem Poland in February 2017 It includes twelve interesting papers covering current topics related to both cyclostationary and general non stationary processes Moreover this book which covers both theoretical and practical issues offers a practice oriented guide to the analysis of data sets with non stationary behavior and a bridge between basic and applied research on nonstationary processes It provides students researchers and professionals with a timely guide on cyclostationary systems nonstationary

processes and relevant engineering applications **Resampling Methods for Dependent Data** S. N. Lahiri, 2013-03-09

This is a book on bootstrap and related resampling methods for temporal and spatial data exhibiting various forms of dependence Like the resampling methods for independent data these methods provide tools for statistical analysis of dependent data without requiring stringent structural assumptions This is an important aspect of the resampling methods in the dependent case as the problem of model misspecification is more prevalent under dependence and traditional statistical methods are often very sensitive to deviations from model assumptions Following the tremendous success of Efron's 1979 bootstrap to provide answers to many complex problems involving independent data and following Singh's 1981 example on the inadequacy of the method under dependence there have been several attempts in the literature to extend the bootstrap method to the dependent case A breakthrough was achieved when resampling of single observations was replaced with block resampling an idea that was put forward by Hall 1985 Carlstein 1986 Kiinsch 1989 Liu and Singh 1992 and others in various forms and in different inference problems There has been a vigorous development in the area of resampling methods for dependent data since then and it is still an area of active research This book describes various aspects of the theory and methodology of resampling methods for dependent data developed over the last two decades There are mainly two target audiences for the book with the level of exposition of the relevant parts tailored to each audience **Bootstrap Methods and Their Application** A.
