**EYE MOVEMENT DESENSITIZATION AND REPROCESSING (EMDR) THERAPY.** Cloe Warey, 2021-02-23 Have you heard of EMDR therapy Although this therapy comes from the United States more and more psychologists use it in many countries since most psychologists are aware that when trauma exists there is a disconnection between the past and the present between emotions and cognition This rupture makes conventional therapeutic approaches difficult making talking or bringing up old emotions not only not effective but sometimes it can even make the patient more sensitive Explaining trauma is not enough So a Californian psychologist began working on a revolutionary technique called Eye Movement Desensitization and Reprocessing EMDR It all started in 1987 while Francine Shapiro a Senior Researcher at the Mental Research Institute in Palo Alto California was taking a walk in the park Then she realized that the thoughts that disturbed her had disappeared and later when they returned they no longer bothered her as before Paying more attention he realized that when a disturbing thought came to his mind his eyes began to move quickly Then she began to experiment thinking about past experiences that still bothered her while moving her eyes He then began applying the EMDR technique to his patients to help them process traumatic memories Its results were excellent since EMDR allows you to work with the trauma by reprocessing it to leave behind painful emotions

*Eye Movement Desensitization and Reprocessing (EMDR)* Patrick Marshwell, 2022-09-27 More than 20 000 people have been educated to utilize the Eye Movement Desensitization and

Reprocessing EMDR technique since it was established in 1989 by psychologist Francine Shapiro. When Shapiro was out on a stroll in the woods one day she observed that her bad feelings began to subside when she moved her eyes rapidly from side to side. This led her to theorize that EMDR could have some beneficial benefits. In a similar vein she discovered that patients had the same good impact. People who have gone through traumatic situations and who participate in EMDR treatment may find that it is beneficial to them. It is a methodical therapy that involves encouraging the patient to momentarily focus on the horrific memory while concurrently getting bilateral stimulation which is often done with eye movements. This is done to combat post traumatic stress disorder PTSD. EMDR is currently employed in the treatment of a wide range of psychiatric conditions including post traumatic stress disorder PTSD anxiety and depression. It has been demonstrated that the approach is an efficient method of treatment for lowering the intensity of symptoms and raising overall functioning levels. In this quick start guide we will discuss the following: What is eye movement desensitization and reprocessing therapy? Who can benefit from EMDR therapy? How effective is EMDR and how does it work? What to expect from EMDR therapy? Comparing EMDR to other therapies. Keep reading to learn more about EMDR and how it can help you heal from past trauma.
