Dynamic Epistemic Logic Synthese Library:

Dynamic Formal Epistemology Patrick Girard, Olivier Roy, Mathieu Marion, 2011-01-06 This volume is a collation of original contributions from the key actors of a new trend in the contemporary theory of knowledge and belief that we call dynamic epistemology It brings the works of these researchers under a single umbrella by highlighting the coherence of their current themes and by establishing connections between topics that up until now have been investigated independently It also illustrates how the new analytical toolbox unveils questions about the theory of knowledge belief preference action and rationality in a number of central axes in dynamic epistemology temporal social probabilistic and even deontic dynamics

Logical Dynamics of Information and Interaction Johan van Benthem, 2011-09-29 This book develops a view of logic as a theory of information driven agency and intelligent interaction between many agents with conversation argumentation and games as guiding examples It provides one uniform account of dynamic logics for acts of inference observation questions and communication that can handle both update of knowledge and revision of beliefs It then extends the dynamic style of analysis to include changing preferences and goals temporal processes group action and strategic interaction in games Throughout the book develops a mathematical theory unifying all these systems and positioning them at the interface of logic philosophy computer science and game theory A series of further chapters explores repercussions of the dynamic stance for these areas as well as cognitive science

Johan van Benthem on Logic and Information Dynamics Alexandru Baltag, Sonja Smets, 2014-08-27 This book illustrates the program of Logical Informational Dynamics Rational agents exploit the information available in the world in delicate ways adopt a wide range of epistemic attitudes and in that process constantly change the world itself Logical Informational Dynamics is about logical systems putting such activities at center stage focusing on the events by which we acquire information and change attitudes Its contributions show many current logics of information and change at work often in multi agent settings where social behavior is essential and often stressing Johan van Benthem's pioneering work in establishing this program However this is not a Festschrift but a rich tapestry for a field with a wealth of strands of its own The reader will see the state of the art in such topics as information update belief change preference learning over time and strategic interaction in games Moreover no tight boundary has been enforced and some chapters add more general mathematical or philosophical foundations or links to current trends in computer science The theme of this book lies at the interface of many disciplines Logic is the main methodology but the various chapters cross easily between mathematics computer science philosophy linguistics cognitive and social sciences while also ranging from pure theory to empirical work Accordingly the authors of this book represent a wide variety of original thinkers from different research communities And their interconnected themes challenge at the same time how we think of logic philosophy and computation Thus very much in line with van Benthem's work over many decades the volume shows how all these disciplines form a natural unity in the perspective of dynamic logicians broadly conceived exploring their new themes today

And at the same time in doing so it offers a broader conception of logic with a certain grandeur moving its horizons beyond the traditional study of consequence relations

Fundamentals of Software Engineering Hossein Hojjat, Mieke Massink, 2021-10-16 This book constitutes the thoroughly refereed post conference proceedings of the 9th International Conference on Fundamentals of Software Engineering FSEN 2021 held virtually and hosted by IPM in May 2021 The 12 full papers and 4 short papers presented in this volume were carefully reviewed and selected from 38 submissions The topics of interest in FSEN span over all aspects of formal methods especially those related to advancing the application of formal methods in the software industry and promoting their integration with practical engineering techniques The papers are organized in topical sections on coordination logic networks parallel computation and testing

Jaakko Hintikka on Knowledge and Game-Theoretical Semantics Hans van Ditmarsch, Gabriel Sandu, 2018-01-31 This book focuses on the game theoretical semantics and epistemic logic of Jaakko Hintikka Hintikka was a prodigious and esteemed philosopher and logician and his death in August 2015 was a huge loss to the philosophical community This book whose chapters have been in preparation for several years is dedicated to the work of Jaakko Hintikka and to his memory This edited volume consists of 23 contributions from leading logicians and philosophers who discuss themes that span across the entire range of Hintikka's career Semantic Representationalism Logical Dialogues Knowledge and Epistemic logic are among some of the topics covered in this book's chapters The book should appeal to students scholars and teachers who wish to explore the philosophy of Jaakko Hintikka

The Impossible Mark Jago, 2014-04-24 Mark Jago presents an original philosophical account of meaningful thought in particular how it is meaningful to think about things that are impossible We think about impossible things all the time We can think about alchemists trying to turn base metal to gold and about unfortunate mathematicians trying to square the circle We may ponder whether god exists and philosophers frequently debate whether properties numbers sets moral and aesthetic qualities and qualia exist In many philosophical or mathematical debates when one side of the argument gets things wrong it necessarily gets them wrong As we consider both sides of one of these philosophical arguments we will at some point think about something that's impossible Yet most philosophical accounts of meaning and content hold that we can't meaningfully think or reason about the impossible In *The Impossible* Jago argues that we often gain new information new beliefs and sometimes fresh knowledge through logic mathematics and philosophy That is why logic mathematics and philosophy are useful We therefore require accounts of knowledge and belief of information and content and of meaning which allow space for the impossible Jago's aim in this book is to provide such accounts He gives a detailed analysis of the concept of hyperintensionality whereby logically equivalent contents may be distinct and develops a theory in terms of possible and impossible worlds Along the way he provides a theory of what those worlds are and how they feature in our analysis of normative epistemic concepts knowledge belief information and content

Handbook of Abductive Cognition Lorenzo Magnani, 2023-03-31 This Handbook offers the first comprehensive reference guide to the interdisciplinary

field of abductive cognition providing readers with extensive information on the process of reasoning to hypotheses in humans animals and in computational machines It highlights the role of abduction in both theory practice in generating and testing hypotheses and explanatory functions for various purposes and as an educational device It merges logical cognitive epistemological and philosophical perspectives with more practical needs relating to the application of abduction across various disciplines and practices such as in diagnosis creative reasoning scientific discovery diagrammatic and ignorance based cognition and adversarial strategies It also discusses the inferential role of models in hypothetical reasoning abduction and creativity including the process of development implementation and manipulation for different scientific and technological purposes Written by a group of internationally renowned experts in philosophy logic general epistemology mathematics cognitive and computer science as well as life sciences engineering architecture and economics the Handbook of Abductive Cognition offers a unique reference guide for readers approaching the process of reasoning to hypotheses from different perspectives and for various theoretical and practical purposes Numerous diagrams schemes and other visual representations are included to promote a better understanding of the relevant concepts and to make concepts highly accessible to an audience of scholars and students with different scientific backgrounds Epistemic Dynamics and Protocol

puzzles enliven the exposition The book also offers exercises with answers It is suitable for graduate courses in logic Many examples exercises and thorough completeness proofs and expressivity results are included A companion web page offers slides for lecturers and exams for further practice *Multi-agent Systems and Applications ...* ,2005 **Theoretical Aspects of Rationality and Knowledge** Johan van Benthem,2001 Proceedings of the biennial Conferences on Theoretical Aspects of Reasoning about Knowledge and Theoretical Aspects of Rationality and Knowledge Current volume 8th Conference on Theoretical Aspects of Rationality and Knowledge *Mathematical Reviews* ,2004 [A Protocol-theoretic Framework for the Logic of Epistemic Norms](#) Ralph Jenkins,2022-09-26 This book defines a logical system called the Protocol theoretic Logic of Epistemic Norms PLEN it develops PLEN into a formal framework for representing and reasoning about epistemic norms and it shows that PLEN is theoretically interesting and useful with regard to the aims of such a framework In order to motivate the project the author defends an account of epistemic norms called epistemic proceduralism The core of this view is the idea that in virtue of their indispensable regulative role in cognitive life epistemic norms are closely intertwined with procedural rules that restrict epistemic actions procedures and processes The resulting organizing principle of the book is that epistemic norms are protocols for epistemic planning and control The core of the book is developing PLEN which is essentially a novel variant of propositional dynamic logic PDL distinguished by more or less elaborate revisions of PDL s syntax and semantics The syntax encodes the procedural content of epistemic norms by means of the well known protocol or program constructions of dynamic and epistemic logics It then provides a novel language of operators on protocols including a range of unique protocol equivalence relations syntactic operations on protocols and various procedural relations among protocols in addition to the standard dynamic modal operators of PDL The semantics of the system then interprets protocol expressions and expressions embedding protocols over a class of directed multigraph like structures rather than the standard labeled transition systems or modal frames The intent of the system is to better represent epistemic dynamics build a logic of protocols atop it and then show that the resulting logic of protocols is useful as a logical framework for epistemic norms The resulting theory of epistemic norms centers on notions of norm equivalence derived from theories of process equivalence familiar from the study of dynamic and modal logics The canonical account of protocol equivalence in PLEN turns out to possess a number of interesting formal features including satisfaction of important conditions on hyperintensional equivalence a matter of recently recognized importance in the logic of norms generally To show that the system is interesting and useful as a framework for representing and reasoning about epistemic norms the author applies the logical system to the analysis of epistemic deontic operators and partly on the basis of this establishes representation theorems linking protocols to the action guiding content of epistemic norms The protocol theoretic logic of epistemic norms is then shown to almost immediately validate the main principles of epistemic proceduralism **The Logic of Epistemology and the Epistemology of Logic** Jaakko Hintikka,Merrill B.P. Hintikka,1989-02-28 somewhat like Henkin s

nonstandard interpretation of higher order logics while the right semantics or logical modalities is an analogue to the standard of type theory in Henkin's sense interpretation. Another possibility would be to follow W V Quine's advice to give up logical modalities as being beyond repair. Or we could also try to develop a logic of conceptual possibility restricting the range of our possible worlds to those compatible with the transcendental presuppositions of our own conceptual system. This looks in fact like one of the most interesting possible theories I have dreamt of developing but undoubtedly never will. Its kinship with Kant's way of thinking should be obvious. Besides putting the entire enterprise of possible worlds semantics into a perspective we can also see that the actual history of possible worlds semantics is more complicated than it might first appear to be. For the standard interpretation of modal logics has reared its beautiful head repeatedly in the writings of Stig Kanger, Richard Montague, the pre-Montague semantics theorist and Nino Cocchiarella. **Modeling and Using Context**, 2003 Logique et analyse, 1991 **Subject Guide to Books in Print**, 1996
