*Dynamic Modeling of Diseases and Pests* Bruce Hannon,Matthias Ruth,2008-10-16 The ease of use of the programs in the application to ever more complex cases of disease and pestilence The lack of need on the part of the student or modelers of mathematics beyond algebra and the lack of need of any prior computer programming experience The surprising insights that can be gained from initially simple systems models      *Dynamical Modeling of Environmental Systems* Michael L. Deaton,2000      *Modeling Dynamic Biological Systems* Bruce Hannon,Matthias Ruth,2014-07-05 Many biologists and ecologists have developed models that find widespread use in theoretical investigations and in applications to organism behavior disease control population and metapopulation theory ecosystem dynamics and environmental management This book captures and extends the process of model development by concentrating on the dynamic aspects of these processes and by providing the tools such that virtually anyone with basic knowledge in the Life Sciences can develop meaningful dynamic models Examples of the systems modeled in the book range from models of cell development the beating heart the growth and spread of insects spatial competition and extinction to the spread and control of epidemics including the conditions for the development of chaos Key features easy to learn and easy to use software examples from many

subdisciplines of biology covering models of cells organisms populations and metapopulations no prior computer or programming experience required Key benefits learn how to develop modeling skills and system thinking on your own rather than use models developed by others be able to easily run models under alternative assumptions and investigate the implications of these assumptions for the dynamics of the biological system being modeled develop skills to assess the dynamics of biological systems

**Dynamic Systems, Economic Growth, and the Environment** Jesús Crespo Cuaresma, Tapio Palokangas, Alexander Tarasyev, 2009-10-20 The major goal of the book is to create an environment for matching different disciplinary approaches to studying economic growth This goal is implemented on the basis of results of the Symposium Applications of Dynamic Systems to Economic Growth with Environment which was held at the International Institute for Applied Systems Analysis IIASA on the 7th 8th of November 2008 within the IIASA Project Driving Forces of Economic Growth ECG The symposium was organized by coordinators of the ECG project Jesus Crespo Cuaresma from IIASA World Population Program and Tapio Palokangas and Alexander Tarasyev from IIASA Dynamic Systems Program The book addresses the issues of sustainability of economic growth in a changing environment global warming and exhausting energy resources technological change and also focuses on explanations of significant fluctuations in countries growth rates The chapters focus on the analysis of historical economic growth experiences in relation to environmental policy technological change development of transport infrastructure population issues and environmental mortality The book is written in a popular science style accessible to any intelligent lay reader The prime audience for the book is economists mathematicians and engineers working on problems of economic growth and environment The mathematical part of the book is presented in a rigorous manner and the detailed analysis is expected to be of interest to specialists in optimal control and applications to economic modeling The book consists of four interrelated parts

*Landscape Simulation Modeling* Robert Costanza, Alexey Voinov, 2003-10-31 The world consists of many complex systems ranging from our own bodies to ecosystems to economic systems Despite their diversity complex systems have many structural and functional features in common that can be effectively simulated using powerful user friendly software As a result virtually anyone can explore the nature of complex systems and their dynamical behavior under a range of assumptions and conditions This ability to model dynamic systems is already having a powerful influence on teaching and studying complexity The books in this series will promote this revolution in systems thinking by integrating computational skills of numeracy and techniques of dynamic modeling into a variety of disciplines The unifying theme across the series will be the power and simplicity of the model building process and all books are designed to engage the reader in developing their own models for exploration of the dynamics of systems that are of interest to them Modeling Dynamic Systems does not endorse any particular modeling paradigm or software Rather the volumes in the series will emphasize simplicity of learning expressive power and

the speed of execution as priorities that will facilitate deeper system understanding
