## **Dynamic Learning Networks Dynamic Learning Networks:**

**Dynamic Learning Networks** Aldo Romano, Giustina Secundo, 2009-05-28 Dynamic Learning Networks Models and Cases in Action represents an attempt to provide a network perspective of organizational learning to drive dynamic competition through extended firm learning processes This edited volume contributed by worldwide experts in the field provides academics and company managers with an extended view of organizational learning networks from real cases and different perspectives Dynamic Learning Networks Models and Cases in Action is based on the workshop Managing Uncertainty and Competition through Dynamic Learning Networks It was organized by the E Business Management Section of Scuola Superiore ISUFI University of Salento Italy and held in Ostuni Italy in July 2008 Dynamic Learning Networks Models and Cases in Action is designed for a professional audience composed of researchers and practitioners working in corporate learning This volume is also suitable for advanced level students in computer science **Dynamic Learning with Neural Networks and Support Vector Machines** ,2005 **Exploring Neuromodulatory Systems for Dynamic Learning** Anurag Daram, 2019 In a continual learning system the network has to dynamically learn new tasks from few samples throughout its lifetime It is observed that neuromodulation acts as a key factor in continual and dynamic learning in the central nervous system In this work the neuromodulatory plasticity is embedded with dynamic learning architectures The network has an inbuilt modulatory unit that regulates learning depending on the context and the internal state of the system thus rendering the networks with the ability to self modify their weights In one of the proposed architectures ModNet a modulatory layer is introduced in a random projection framework This layer modulates the weights of the output layer neurons in tandem with hebbian learning Moreover to explore modulatory mechanisms in conjunction with backpropagation in deeper networks a modulatory trace learning rule is introduced The proposed learning rule uses a time dependent trace to automatically modify the synaptic connections as a function of ongoing states and activations The trace itself is updated via simple plasticity rules thus reducing the demand on resources A digital architecture is proposed for ModNet with on device learning and resource sharing to facilitate the efficacy of dynamic learning on the edge The proposed modulatory learning architecture and learning rules demonstrate the ability to learn from few samples train quickly and perform one shot image classification in a computationally efficient manner The ModNet architecture achieves an accuracy of 91% for image classification on the MNIST dataset while training for just 2 epochs The deeper network with modulatory trace achieves an average accuracy of 98.8% 1.16 on the omniglot dataset for five way one shot image classification task In general incorporating neuromodulation in deep neural networks shows promise for energy and resource efficient lifelong learning systems Abstract **Studia biophysica** ,1990 International Aerospace Abstracts ,1997 **Smart Engineering System Design** Cihan H.
