## **Dynamic Properties Of Forest Ecosystems International Biological Programme Synthesis Series:**

**Dynamic Properties of Forest Ecosystems** David E. Reichle, 2009-06-04 This volume which is based upon years of research effort and numerous meetings by a large number of scientists throughout the world brings together different schools of ecological investigation of woodlands After a description of the structure and floristic composition of the research sites involving a comparison of boreal temperate Mediterranean and tropical forest the study goes on to consider the dynamic aspects of the woodland formation These include growth and succession carbon dioxide balance water relations soil processes and chemical cycling Further chapters discuss comparative productivity biomass and carbon metabolism Forest growth and water balance are investigated using complex ecosystem models and the predictive value of such models is tested against observations

**Forest Ecosystems** Richard H. Waring, Steven W. Running, 2010-07-27 This revision maintains the position of Forest Ecosystems as the one source for the latest information on the advanced methods that have enhanced our understating of forest ecosystems Further understanding is given to techniques to explore the changes in climatic cycles the implications of wide scale pollution fire and other ecological disturbances that have a global effect The inclusion of models equations graphs and tabular examples provides readers with a full understanding of the methods and techniques Includes a revised section on important advances in regional scale analyses Features an update to global scale analyses including revised color images Provides a detailed comparison of predicted vs observed tree diversity across 65 eco regions

**Concepts of Ecosystem Ecology** Lawrence R. Pomeroy, James J. Alberts, 2012-12-06 In this volume 19 leading experts offer a timely and coherent overview of the fundamental principles of ecosystem science They examine the flux of energy and biologically essential elements and their associated food webs in major terrestrial and aquatic ecosystems such as forests grasslands cultivated land streams coral reefs and ocean basins In each case interactions between different ecosystems predictive models and the application of ecosystem research to the management of natural resources are given special emphasis A number of theoretical chapters provide a synthesis through critical discussion of current concepts of ecosystem energetics and dynamics

**Global Change and the Terrestrial Biosphere** H. H. Shugart, F. I. Woodward, 2011-06-13 Global climate change challenges ecologists to synthesize what we know to solve a problem with deep historical roots in our discipline In ecology the question How do terrestrial ecosystems interact with the other earth systems to produce planetary change has sufficient depth to be the focal challenge This central question is sharpened further as the changes that we may be manifesting upon our planet s systems of land sea air and ice can have potential consequences for the future of human civilization This book provides the depth of the history of global ecology and reviews the breadth of the ideas being studied today Each chapter starts with a brief narrative about a scientist whose work traces forward into today s issues in global ecosystems The discussions are framed in a growing realization that we may be

altering the way our planet functions almost before we have gained the necessary knowledge of how it works at all

*Advances in Ecological Research* ,1986-02-07 Jarvis and McNaughton provide a cogent example of the impact of physiological studies in ecology The study of transpiration is of basic importance in botany and their paper shows how the often conflicting conclusions reached by physiological ecologists and micrometeorologists may be reconciled Courtney s analysis of Pereid butterfly ecology looks at the various evolutionary strategies adopted by the butterflies their food plants and their predators and parasites Franklin and his colleagues have distilled years of research on the decomposition of woody debris into a comprehensive treatment of both the nature and importance of this process in a variety of environments Vogt and her colleagues also deal with an aspect of decomposition focusing instead on the importance of the death and decay of root material Finally Hartenstein presents a lively discussion on the serious consequences of soil organic carbon deficiency Combining man made organic waste and earthworm based biotechnology might help in managing carbon poor soils FROM THE PREFACE Over recent years physiological plant ecology has been one of the most active areas of ecological research It offers a prospect of explaining community function in terms of how the physiological properties of individual plants relate to patterns of microclimate generated in the community itself However the strategies of investigation and measurement techniques of the physiological ecologist frequently require very detailed work on just small amounts of material Providing an integrated assessment of community function from such investigations may not be straightforward      **Scientific and**
