Ecological Connectivity Among Tropical Coastal Ecosystems:

Ecological Connectivity among Tropical Coastal Ecosystems Ivan Nagelkerken, 2009-09-23 Mangrove forests seagrass beds and coral reefs are circumtropical ecosystems that are highly productive and provide many important biological functions and economic services. These ecosystems cover large surface areas in the shallow tropical coastal seascape but have suffered from serious human degradation especially in the last few decades. Part of their diversity, productivity and functioning seems to be based on their juxtaposition. Especially in the last decade, significant advances have been made on new insights into their ecological connectivity. This authoritative book provides a first time comprehensive review of the major ecological interactions across tropical marine ecosystems that result from the mutual exchange of nutrients, organic matter, fish and crustaceans. A group of leading authors from around the world reviews the patterns and underlying mechanisms of important biogeochemical and biological linkages among tropical coastal ecosystems in 15 chapters. Included are chapters that review cutting edge tools to study and quantify these linkages, the importance of such linkages for fisheries and how tropical ecosystems should be conserved and managed for sustainable use by future generations. The book uses examples from all over the world and provides an up to date review of the latest published literature. This book is a must read for professionals working on the conservation, management and ecology of mangrove, seagrass and coral reef ecosystems.

Seascape Ecology Simon J. Pittman, 2017-10-30. *Seascape Ecology* provides a comprehensive look at the state of the science in the application of landscape ecology to the seas and provides guidance for future research priorities. The first book devoted exclusively to this rapidly emerging and increasingly important discipline, it is comprised of contributions from researchers at the forefront of seascape ecology working around the world. It presents the principles, concepts, methodology, and techniques informing seascape ecology and reports on the latest developments in the application of the approach to marine ecology and management. A growing number of marine scientists, geographers, and marine managers are asking questions about the marine environment that are best addressed with a landscape ecology perspective. *Seascape Ecology* represents the first serious effort to fill the gap in the literature on the subject. Key topics and features of interest include: The origins and history of seascape ecology and various approaches to spatial patterning in the sea; The links between seascape patterns and ecological processes, with special attention paid to the roles played by seagrasses and salt marshes and animal movements through seascapes; Human influences on seascape ecology; Includes models for assessing human seascape interactions; A special epilogue in which three eminent scientists who have been instrumental in shaping the course of landscape ecology offer their insights and perspectives. *Seascape Ecology* is a must-read for researchers and professionals in an array of disciplines including marine biology, environmental science, geosciences, marine and coastal management, and environmental protection. It is also an excellent supplementary text for university courses in those fields.

Mangroves in a Changing World: Adaptation and Resilience Vidya

Padmakumar, Murugan Shanthakumar, 2024-09-23. Mangroves are among the most productive and diverse ecosystems on Earth, providing a range of ecosystem services that benefit millions of people and support global sustainability goals. However, mangroves are also highly vulnerable to climate change impacts such as sea level rise, storms, salinity changes, and erosion, which threaten their survival and functionality. This book aims to provide researchers with the latest scientific knowledge and practical tools to understand, assess, and enhance the adaptation and resilience of mangroves to climate change. It covers topics such as mangrove ecology and distribution, mangrove ecosystem services and valuation, mangrove adaptation and resilience mechanisms and indicators, mangrove restoration and conservation strategies, mangrove governance and policy frameworks, and mangrove modelling and mapping approaches. The book also showcases case studies from different regions of the world, highlighting the challenges and opportunities of mangrove management in a changing world. The book is intended to serve as a valuable reference and resource for researchers, students, practitioners, policymakers, and anyone interested in mangrove science and management.
