Dynamic Modeling For Marine Conservation Modeling Dynamic Systems:

Dynamic Modeling Bruce Hannon, Matthias Ruth, 2001 **Dynamic Modeling for Marine Conservation** Matthias Ruth, James Lindholm, 2012-12-06 The effects of disturbed ecosystems from devastating algal blooms to the loss of whale populations have demonstrated the vulnerability of the oceans biodiversity This book provides methods for learning how ocean systems function how natural and human actions put them in peril and how we can influence the marine world in order to maintain biodiversity The difficulties of research in the oceans make computer modeling particularly helpful for marine conservation The authors demonstrate dynamic modeling through the use of the STELLA modeling program and case studies from marine conservation **Biological Diversity** L. N. Petrov, 2003 One of the cornerstones of life s wonders is the vast array of species filling the planet From plants to animals to humans there is no shortage of beings to provide spice of life variety is said to be Periodically scientists announce the discovery of a new form of life so it seems as if Earth is capable of producing new species just to keep us on our toes At times the immense breadth of living things can even feel overwhelming as one pauses to ponder how numerically insignificant humans are when compared to the insect population Given the biological diversity of the planet it is incumbent upon humans to safeguard the natural beauty of the environment To that end conservation takes on special importance necessitating the balancing of industrial expansion with preserving the flora and fauna surrounding us This book is an important tool in understanding and researching the many different life forms spanning the globe Collected here is a substantial and carefully selected listing of relevant literature on biological diversity and its conservation Following this bibliography are author title and subject indexes to allow for further access to this information The sheer bulk of the works about biological diversity can be so intimidating that a book such as this one becomes useful in sorting through the resources about the importance of life s variety **The Zoological Record** , 2003 **Marine Modeling** Edward D. Goldberg, 1977 System Dynamics '96 George P. Richardson, John D. Sterman, 1996 Dynamic Modeling of Environmental Systems Michael L. Deaton, James J. Winebrake, 2012-12-06 Dynamic Modeling of Environmental Systems is a primer on using models to understand environmental problems With their many natural economic political and technical aspects environmental problems require a systems approach This book provides an introduction to modeling concepts and applications that is specifically geared toward the environmental field Sections on modeling terminology the uses of models the model building process and the interpretation of output provide the foundation for detailed applications After an introduction to the basics of dynamic modeling the book leads students through an analysis of several environmental problems including surface water pollution matter cycling disruptions and global warming The scientific and technical context is provided for each problem and the methods for analyzing and designing appropriate modeling approaches is provided While the mathematical content does not exceed the level of a first semester Calculus course the book gives students all of the background examples and practice exercises needed both to use and understand environmental modeling

It is suitable for upper level undergraduate and beginning graduate level environmental science courses The text is also useful for environmental professionals seeking an introduction to modeling in their field
