Modeling and Simulation of Nanofluid Flow Problems Snehashish Chakraverty, Uddhaba Biswal, 2020-03-20 In general

nanofluid is suspension of nanometer sized particle in base fluids such as water oil ethylene glycol mixture etc Nanofluid has more thermal conductivity compared to the base fluids As such the nanofluid has more heat transfer capacity than the base fluids In order to study nanofluid flow problems we need to solve related nonlinear differential equations analytically or numerically But in most cases we may not get an analytical solution Accordingly the related nonlinear differential equations need to be solved by efficient numerical methods Accordingly this book addresses various challenging problems related to nanofluid flow In this regard different efficient numerical methods such as homotopy perturbation method Galerkin s method and least square method are included Further the above practical problems are validated in special cases We believe that this book will be very beneficial for readers who want firsthand knowledge on how to solve nanofluid flow problems
