Thinking Critically John Allen, 2023 By 2007 giant tobacco had begun selling their own versions of e cigarettes They marketed e cigarettes as so called smoking cessation devices or aids to help smokers quit their dangerous habit They claimed e cigarettes were a more effective version of nicotine patches and nicotine gum which delivered the addictive substance in a less hazardous form The federal government pushed back against e cigarettes and teen vaping due to its health consequences Researchers found that vapor from e cigarettes is dangerous It contains toxic chemicals such as formaldehyde and acrolein that could cause cancer and lung disease It also contains heavy metals and volatile organic compounds that increase the risk of lung damage In addition the nicotine in e cigarettes is not only highly addictive it can also affect brain development in young people

Episodic Future Thinking as an Intervention for Dependent

E-cigarette Users B. Eric Turnquist, 2022 There has been an alarming increase in e cigarette use and dependence among young people many of whom would like to quit using e cigarettes but are finding it difficult to do so Impulsivity is associated

with drug taking across many different types of drugs including nicotine. In prior research with cigarette smokers, cognitive interventions designed to reduce impulsivity such as Episodic Future Thinking (EFT) have been shown to reduce cigarette demand and self-administration. The aim of the present study was to test if a brief EFT intervention decreases nicotine craving, impulsivity, and smoking choice among daily young adult e-cigarette users. Participants (N = 33; M = 21 years of age; 63% female; M = 13 e-cig uses per day) attended three within-subjects experimental sessions administered via Zoom. After a baseline acclimation session, participants attended two experimental sessions in counterbalanced order: 1) EFT in which they pre-experienced and described positive future events, and 2) A control intervention in which they described their experiences watching three short videos. Measures of craving, mood, and delay discounting across three commodities (money, e-cigarette products, and food) were completed before and after the manipulations. Within-subjects repeated measures ANOVAs revealed decreases in monetary delay discounting and craving in response to EFT. At the end of each session, participants also took part in a 40-minute vaping vs. money choice task. While survival analyses were not significant, 30.3% of participants chose to smoke after the EFT condition compared to 39.4% after the control condition. Additional research is needed to support the efficacy of EFT as a brief intervention for helping e-cigarette users increase their ability to abstain.

Tobacco Regulation, Economics, and Public Health, Volume II Samuel C. Hampsher-Monk, James E. Prieger, Sudhanshu Patwardhan, 2024-05-30. For millions of people, e-cigarettes provide a means to relieve nicotine cravings while avoiding harmful cigarette smoke. In the second volume in this three-volume resource, the authors provide a critical review of evidence concerning the health effects of vaping and whether using e-cigarettes helps or hinders cessation from smoking. The empirical evidence, however, does not help decision makers resolve the normative questions relating to e-cigarettes. Different priorities, values, and interpretations of available data have led to seemingly intractable disagreements between stakeholders about the promise of e-cigarettes for smoking cessation and the risks they pose to public health. The misinformation and motivated bias surrounding issues regarding vaping both follow from but also enhance polarization, perpetuating confusion about e-cigarettes and leading to poor decision making by government agencies and people who smoke. The authors argue that ultimately the safety and efficacy of e-cigarettes for smoking cessation are not immutable properties of the product class itself; rather, they are diverse and dynamic but are also contingent upon the conditions of the regulatory environment and the manner in which e-cigarettes are discussed by regulators and the media. This volume provides important context to help decision makers at all levels better understand the risk and benefits of e-cigarettes and the tradeoffs between them.

Public Health Consequences of E-Cigarettes National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Population Health and Public Health Practice, Committee on the Review of the Health Effects of Electronic Nicotine Delivery Systems, 2018-06-18. Millions of Americans use e-cigarettes. Despite their popularity, little is known about their health effects. Some suggest that e-cigarettes likely confer lower risk compared to combustible tobacco cigarettes.

because they do not expose users to toxicants produced through combustion Proponents of e cigarette use also tout the potential benefits of e cigarettes as devices that could help combustible tobacco cigarette smokers to quit and thereby reduce tobacco related health risks Others are concerned about the exposure to potentially toxic substances contained in e cigarette emissions especially in individuals who have never used tobacco products such as youth and young adults Given their relatively recent introduction there has been little time for a scientific body of evidence to develop on the health effects of e cigarettes Public Health Consequences of E Cigarettes reviews and critically assesses the state of the emerging evidence about e cigarettes and health This report makes recommendations for the improvement of this research and highlights gaps that are a priority for future research
